Hey guys,  
have you ever had a problem like this? When I send stuff via the adat card out my DA16x only channels 1,2,7,8 work. I have had this with analog output cards before but this is via an adat card. Is there a problem with the adat card, or is this yet another unfixed bug in a long list? Is there anything I can do?  
Thanks for any feedback,  
Ted

Make sure that the S-MUX feature is disabled on the DA

David.

Yes, I've had this problem with one of my ADAT cards, and can't (haven't needed to) chase it down systematically. But in my case, it's only channels 3&4 that don't pass audio. I can't remember if I've transplanted the card to another slot in the MEC or swapped it into a different system to see if it's the EDS card.

I think I've even mentioned this to you when you used to live here...
