Hi Mike,

the thing with "Boot secure off" works (word by word translation from german in english ;) ). The device manager shows, that is all alright.

But Paris 2.1 don't start after booting the Paris Mec Hardware right (the computer froze often ) and the Paris asio driver do not appear in Cubase 12.

Whats going wrong with me here ?

Is my driver Version to old ? You told me that you've worked till 2019 on a new driver. But the Date and Number of both Version are the same ? See my picture an yours, Driver 5.1.0.0 and Date 2016 10 31, from device manager?

Best regards

Dan
