
Subject: Trying to use Chainer and/or Spinaudio wrapper

To Anyone,

I'm trying to find a DX wrapper that will work with UAD-1 on my new computer.

I downloaded demo version of "Chainer" and Spinaudio wrapper. I can load

Chainer, and it shows me a very promising interface, but unless I bypass

Chainer I don't get any sound out of my track.

When I use spinaudio I can choose my plugin, but there is no effect when

I change the settings.

Can someone help me?

Thanks,

ron

OK, I've made some progress...

I inserted "insert" on the first Chainer channel and now I can get UAD-1 effects to work when loaded on the subsequent channels. Problem now is that the meters don't work, nor does the UAD-1 plugins reflect the presets that are loaded, even though the audio is effected by preset changes. But I think the last issue may be due to the fact that I'm playing with demo veresion rather than the full version.

Am I doing this right?

Are UAD-1 plugs fully functional in Chainer??

Thanks,

Ron

I've never used Chainer or Spinaudio wrapper, but when using the UAD-1 as a VST effect without the FXpansion wrapper, the meters and presets were unavailable. I think you are going to need to wrap the UAD-1 somehow before you can get full functionality.

Yes,

I just tonight got my Fxpansion 3.3 working once again with my new Paris config. I was having problems because of a different version of Fxpansion that my Samplitude program had loaded. I removed that other version and reloaded 3.3 so now I have meters when using the UAD-1 stuff wrapped with Fxpansion3.3. But since I started checking out Chainer I now would love to have the functionality it offers. I would definately buy the full version if my UAD-1 meters would work. I think it's been done, but I haven't yet figured out how.

Maybe Dmitrios will chime in here and show me the way.

Dimitrios has a scenario figured out wherein it is possible to achieve very low latency (relative to what the FXpansion option offers).

Send up a flare.

;o)
