Subject: Quiet Computer Box or Quiet PCs?
Posted by Bill L on Mon, 22 Oct 2007 15:58:52 GMT

View Forum Message <> Reply to Message

I'm about to put together some new PCs for my studio and I'm undecided
between making a fan-vented box for them or making quiet PCs. I've never
done either; I always kept them in closets, but in my current studio
that is an inconvenient option.

One advantage of quiet PCs is that they will be out in the open for
access to the front, back and insides, and they will take up less space.
Building them will be more expensive, but that is a minor consideration.

A box could be used for several generations of PCs, presumably. It would
have to be big enough for at least 2 machines.

DJ, I know you go for an "open matrix" design, or in popular argot,
"going commando". How do you deal with noise?

Any suggestions/advice from those who have used either approach appreciated.

HI Bill,
If you are building a new machine you can make it really quiet without
having to use a ISO box. There are allot of high quality quiet
components available that will keep machine running 30db or lower under
a full load.

Good DIY parts

CPU heatsinks-
http://www.zalman.com.tw/
Great heat sinks but the cases suck.

Cases-

Tower
Antec Performance One cases
http://www.antec.com/us/pro_en_performance1.php
very good air flow and cable management

rack mount

Chenbro
http://usa.chenbro.com/corporatesite/products_detail.php?ser no=2

Fans-
Noctua
http://www.noctua.at/main.php?show=produkte&lng=en
quiet and good CFM

Acoustical Foam
http://www.acoustiproducts.com/en/acoustipack_stnd.asp

Power supply-

Thermaltake
http://www.thermaltakeusa.com/product/Power/ToughPower/w0163 /w0163.asp

Antec-
http://www.antec.com/us/pro_p_NeoHE.php

they are in a room about 15 feet from my mixing desk with enough various
kinds of long cabling stretching across to the door of the machine room from
the desk area to be hazardous to your health should you trip and fall.

I call the area behind my racks and desk "Jumangi"

A quiet computer would do me no good at all unless I had 15' long cables
from the comp to the Magmas which sound about as loud as a small aircraft
idling in the machine room.

why not just replace the loud components of the magmas?

Thanks, Chris for these suggestions. I appreciate your input. I guess
this is my best option.
