Subject: Going between Paris 3.0 & 2.2?
Posted by Kateeba on Mon, 09 Jan 2006 20:15:04 GMT

It's been a long time, and I remember there was a way, but how do I go back and fourth betweeen Paris v3.0 and 2.2?

I have a project in my 3.0, in CT. but I need my friend up un Mass. to add something on it for me.

I was going to bring my project up to his house and let him do his thing, then was hoping to bring it back to my house to do more with it, but he has v 2.2 and I have v3.0.   I thought I remembered a way to go between them.

If not...........Can I just bring the 2 track mix of my project to his house, have him put in in Paris 2.2, and add his music, then bring that back to my project, and just put his .paf files back into my original project? Would that line up properly?

Any suggestions?

Thanks ....Lou

Lou, if memory serves me correctly, you can import projects from 2.2 to 3.0, but not in reverse. Obviously, your 2 track method will work and things should line up if you grid-locked your originating tracks in 3.0.

Best of luck!

Tyrone

You can certainly go from 2.2 to 3 by simply loading the project on 3. There
is a method of getting from version 3 back to 2.2 also. I'm 80% sure that
it simply involved removing every single Aux bus effect (including sends
I think) from the 3 project and then you could simply load it in 2.2. You
just need to set everything aux send related back to what it defaults to
and the project will load back in to 2.2.

....I think...

....I know it is possible. I have done it.

Cheers,
Kim.

To have 2 different version of Paris installed.....

What you should do is (assuming you have v2.x installed):

1) Go to the where the PARIS application is (usually C:\Program Files\Ensoniq\PARIS", Copy the whole PARIS folder to another location (copy, not move)

2) Remove 2.x from Add/Remove panel (this will remove the original copy),

3) Reboot, install 3.0, Reboot.

Now you can use the installed 3.0, and also still run the 2.x copy wherever you have it. You can even move it back to the original location.

You got it Kim.. kill ALL auxes and it should load up in 2.xx just fine from
a version 3 save. Worst case, send the dude rendered stem tracks and have
him render a final track(s) for you starting at the same time on all of them
to import to your project.
