I just received my virtua via

ExpressCard 34 => 4 x PCI Expansion ATX Kit
Options: Connector: ExpressCard 34 + PCIe

and it is very small . have mobos shrunk recently? or is this just a small pcb board that will fit in the standard computer tower case?

the virtua via board is 6.5 inches by 5.5 inches. which isn't mini atx
http://en.wikipedia.org/wiki/Mini_ATX according to wiki is it micro atx? i'm unsure because micro is 6.75 by 6.75 inches

i have four eds 1000 cards, paris software , c16, mec, 2 8 ins

I just have to put together the rig listed over at

<http://kerrygalloway.com/ParisForums/index.php?t=msg&th=14979&start=0> by mr hungaristan

i'm a bit on the fence on what kind of case to get for the virtua via and the four eds cards.

I want to have a psu with 500 watts. should i get a psu with more watts for the 4 eds cards? any brand recommendations?

for the pc case i was planning on going with

<http://www.coolerguys.com/llpca71.html>

I may just get two of these one for the pc and the other for the eds cards.

What are you parisians using for your virtua via case?

<http://www.silentpcreview.com/article75-page5.html> great website on cases

Not sure what case but as far as PSU goes 500w should be plenty if it is just for the cards. I know they use quite a bit in comparison but you are also not powering everything else that is a normal comp. I have a 7 slot Magma chassis with 4 cards spaced out in it with a 350w silent PSU and have had no issues.
