Guys, my CD burner has bitten the dust and I am looking to replace it with a DVD drive. I am a bit concerned as the last time I tried to add a Memorex DVD burner (can't recall which model), it crashed my entire system and I had to rebuild it from scratch. I recently purchased a LITEON CD/DVD burner as it was one the only one I saw with Win 98 drivers. Any comments and or suggestions would be greatly appreciated as I have yet to install the new drive.

System spec's:

Win98se

512 Ram

Asus 8n8x motherboard

Asus 9600se dual head video PCI card

OS drive

Audio drive

Paris 3.0 3 card system

Thanks!

I've been using a Plextor with no problems whatsoever. I've been doing a little experimenting creating CD+G discs, and found out that the Plextor is the only one of the DVD drives I have that handles this format. Not that you need it for that purpose, but it just gives me confidence that the drive is built to be that flexible.

Thanks David. I finally got enough courage to swap out the drive and the "Lite" CD/DVD burner works like a charm and no crashes.
