---

Ugh. I just got a new computer, making sure it was up to snuff for my audio setup, in every respect... except one. The EDS won't fit due to a hard drive bay. I could move it, and get into some serious trouble by attempting some custom mounting, which I am certainly not qualified to do. Has anyone run an EDS in a Magma? Does anyone know what problems this could cause? Would I be better off risking the destruction of my computer by trying to mount the hard drive bay elsewhere?  
Thanks for any help

I'm using 2 EDS cards in a 7 slot Avid branded magma chasis with no problems at all.

I think with PCI slots going the way of the Do Do, this is going to be the only way to use EDS cards with new computers.

All the best,

Mike

Thanks Mike. Is your primary EDS in the Magma? Do they have Magmas for PCI express yet? One more question. Is the magma card that goes in your comp HUGE?

Thanks

All the EDSes have to be connected with ribbon cables, so it's impossible to sepearate them. They are either all in the computer or all in the Magma. Mine are all in the Magma and working perfectly.

As for PCI express:

[http://www.mobl.com/expansion/products/pcie\\_expansion/6slot/index.html](http://www.mobl.com/expansion/products/pcie_expansion/6slot/index.html)

And the host card is small. About the size of an old Adaptec 2940.

All the best,

Mike

Though I have no idea about the magma bay thing, I can tell you  
that it doesn't hurt anything at all to move your hard drive  
around if you need to... as long as you can do it without  
a configuration that would crimp the IDE cables, you're fine.

Ok, now throw XP into the mix. are you using XP?

I found a pretty cheap magma, so things are looking good.

5 EDS cards in a 13 slot Magma on XPHome SP1 here with no problems at all.

David.
