Hi All

I need HELP!!!!

I have a one second vocal line that needs transposing either up two semitones or down two...Autotune isn't cutting it and I was hoping someone who's using Melodyne could help me out.

Thanks

Hi Don,

I don't have Melodyne, but I've been using the Waves Transform pitch/time shift algorithm w/ mostly good results. It's not as transparent as my memory (I had a demo) of Pitch'n'Time, but it's been adequate for many situations I've encountered. If you can send me the track I'll transpose it for you...
