What's your current fave for Cardioid SDC's? I've got a pair of Earthworks TC-30 omni's that kick major bootay, but for cardioid's I decided to try the Rode NT5's, which I picked up several months ago... the Rode's are just not clear enough for my taste - in using them as a pair of room mics for a drum kit, I find they have a bit too much of the "sparkle" factor. I can see how they'd be good for acoustic guitar, for example; but I don't do a whole lot of that sort of thing here... I may end up selling or trading these puppies if anyone's interested.

Easy (but expensive) solution would be to pick up a pair of Earthworks card's, but apart from dropping another ~\$1,600, is there anything you guys are using & like in a lower price range? Josephson C-42's? AT-4041 or 4051? Or????

I'm looking for clean & clear.

Neil

Neil,

I've got a matched pair of SE3's on loan here from Morgan. If you would like, I'll send them down to El Paso and let you give them a test drive. I'm not tracking anything for a couple of weeks and can spare these, though I will feel naked and vulnerable without them. These are getting the nod over my AKG C460B's and my KM 184's on a regular basis for micing guitars. I've got a pair of Rode NT5's here and we're not even talking same ballpark.

Although I haven't tried them the Josephson's are supposed to be an outstanding mic as well as a good value...from all comments I've read by users

Neil,

I've been using a pair of AT4041's for several years as drum overheads. I don't find them to be over hyped. They've been a good all around SDC, but I think they'd fall short when compared directly to the Josephson and Earthworks. I've never had the opportunity to A/B them with anything but the more "budget" mics.

Tony
