OK, someone here pointed me in the direction of the audio damage plug-ins. www.audiodamage.com. I originally went to look at the DubStation, an analog delay emulation. I'm happy to report that I now own their flanger, phaser, delay, plate reverb.

Really cool stuff.

Forgot, I also picked up their step sequencer but I don't think you rock'n'roll guys would care so much about that. It still kicks ass.

Super cool plugs, BIG ATTITUDE.

You need a real 201 space echo!

I had one once! And a tape Echoplex. Both were a little too noisy for me,
but super cool. Now I have the UAD SE emulation and this fabulous new DubStation
(which I think might even be easy enough to use for live DJ/dubbing duties)
to go with the PSP 84 and my various other delays. Pretty effin cool.

Also, the flanger is spectacular.

No wait! All this stuff sucks! Don't use it! Leave it for me!

The waiting time is over. Here it is! The new, modern and real 201
Space Echo.
