Hello..A friend of mine recently got an Alesis HD-24.(not hooked into a
computer)He wants me to put them in PARIS and mix.. I have not used one of
these are they .WAV files? The drive is proprietary,so it doesn't pop into
a standard computer bay..What is the best method to transfer into PARIS ?
Since I changed to XP,my ADAT card doesn't function.. I have had to transfer
ADAT tracks by analog out/in to PARIS...sounds fine...thanks...

Have your friend purchase the Alesis fire-port. Slick as hell..takes less
than 30 seconds to tracks fron the HD24 HD ports. Then you'll have to use
Wavelabe to convert the 24bit wav files to paris paf file..Boom!!! Mix away

>>>The drive is proprietary,so it doesn't pop into
> a standard computer bay..<<<

Actually, the DRIVE is any standard IDE Drive, it is the "caddy" that is
proprietary. You can run down to your local comp store and get a USB or FW
box, slap the drive in there and go! or you can connect the HD24 up to your
router and FTP the files to your DAW which is what I do. Works great - OR
as mentioned you can buy Alesis FW interface for about $100.

Good luck
