1.How many samples delay are between two EDS card in one MEC- computer system?
2.The same question but between chanel-fx aux?

zmora

delay between cards is system dependant, but usually 12 to 14 samples between
the first 2 cards and 2 samples between every card after that. I know that
sounds wierd, but that's the way it is.

>2.The same question but between chanel-fx aux?

2 samples between a channel and an aux you have assign it thru
hope this helps
