Subject: Does the RME HDSP driver support 4 x cards?

View Forum Message <> Reply to Message

I need some more I/O. If I could add another Multiface (total of 4 x HDSP
PCI interfaces on my master DAW), my life would be perfect and I'd never
need to buy another piece of gear ever again.

Hi DJ,
I think 3 is the limit at lest on the MADI card. I think you will break
your setup with the four card. PCI bus and especially memory address
range will probably reach a limit and things will start stepping on each
other.

Will the driver support it? I've got a free IRQ, guaranteed. I would just be using it for some extra analog stereo output busses.

Why not trade a Multiface for a Digiface?

Graham

I need 24 inputs and 32 outputs........well.........it's not like if I don't
have that many, I will die, but it would make a couple of things here a bit
simpler.

;o)

You need a console.... ;-)

David.

You got a DM2000 with 154 digital inputs and 154 digital outputs laying
around that you want to sell cheap? That would work for me.

;o)

HI DJ,

2 MADI cards and a AES 32 card = 160 I/O
Even with the extra analog or digital converters attached to the MADI
cards it will still be cheaper than a console.

Oh and why do you need 152 channels to record a Punk Band?
I think you will become more creative if you are given more limitations. :)

Chris

There is no way you should need 154 I/O for anything... you need to do
some serious streamlining I think!

David.

The brain of DJ doesn't have the word streamline anywhere. I've seen inside.........this
is just his hair !

Looks kinda like load out at the end of the night with my band.

yuk.

This tells the tale and totally validates my mental illness.....plus, it's
actually working, quite nicely, thank you...
