Subject: PARIS 50 pin SCSI cable length?

Has anybody successfully used a SCSI cable with PARIS that is longer than ten feet? I am
referring to the 50 pin cable that connects the MEC to the EDS 1000 card.

Thanks!

My SCSI cables are 12 feet long and work fine. I had them custom made about a decade ago. I
can't remember where, but they are very high quality. I only bought two at about $50 each and
wish I had ordered more.

I seem to remember at the time that some people were using slightly longer cables, but 12 feet
met my needs, and I figured it gave me a safety margin.

All the best,

Mike

Hi !

Finde a hint in Manual.
10 Feet or 3m...
Read Manual at Picture below :

Extending or Replacing the MEC Cable

If you need to replace the supplied cable, make sure that the new cable has 50 conductors—some cables don't—and that the total length of the cable is no greater than ten feet. Use of longer cables or cables with less than 50 conductors may produce unexpected results.

Warning: Do NOT connect the EDS Interface cable to the SCSI interface connector on your computer. Doing so may result in permanent damage to your computer, the MEC, or both.

Connecting the Interface 2 if You are Using a MEC

You can connect an Interface 2 to the MEC's rear-panel Interface 2 connector jack to add an additional two analog inputs and outputs to your system. The Interface 2 will appear in the Patch Bay Window in the PARIS application.

computer must be powered down
