Hi Everyone,

It's been tough to make progress this year, but I'm finally getting traction. I've just started testing a version of the PSCL that is designed to work with jBridge. For those who haven't used jBridge, it allows a 32 bit host to connect with 64 bit VST files. I just started testing it with some 64 bit Waves plugins. So far, so good. The updated PSCL has a low priority thread that checks for jBridge processes and moves them off the CPU used by the PARIS application. This way, we can run 64 bit VSTs on all but one available CPU cores, while not running into the thread-safety issues in the PARIS application.

jBridge can be found here:

<https://jstuff.wordpress.com/jbridge/>

My next move is to work on the kernel driver (scherzo.sys). I bought a new ASUS motherboard with a PCI slot, and the driver does not work with this new board. The new board uses a I/O MMU, which is a new thing for PCs. I suspect that this is the problem, but I'll know more next week. An I/O MMU puts the PCI bus behind a memory controller that has to be programmed in order to allow PCI cards to access main memory. It's an extra level of indirection put in place for security reasons. The driver was not designed for this kind of thing.

I still haven't gotten the EV security certificate. The eventually rejected by documents that were signed by a justice of the peace. It's completely insane. An accountant or a lawyer will do just fine, but a judge can't be trusted. It's nuts. I'm going to go see a notary after I get the kernel driver updated. I only get a year on the certificate, so I think it makes sense to wait until I have this next phase done.

That's all I have to report for now.

All the best,
Mike

The screenshot shows a multi-channel mixer interface with 10 channels. Each channel strip includes a bypass button, a list of loaded plugins (Abbey Road, CLA-2A Ster, dbx-160 Ster), an EQ 1 section with frequency (1000 Hz), gain (0.0 dB), and bandwidth (1.5) controls, an 'ALL EQ' toggle, an EQ ON button, and a solo/mute section. The solo/mute section features colored buttons for Left (yellow), Right (purple), and Center (blue) and a vertical volume slider. The bottom of the mixer shows a timecode of 00:01:48.555 and 'Maximum Files Per' settings.

This is a detailed view of an IR-L convolution reverb plugin window. It displays a table of parameters for a 'Hall - 1' reverb:

	Original	Current
Convolution:	1.85s	1.85s
RT60:	1.4s	1.4s
Channels:	4	4
Size:	11267	11267
Distance:	13m	NA

Additional controls include 'Reverb Time' (0.000s), 'Conv. Length' (Full), 'Latency' (11ms), 'Dry/Wet' (100), 'Direct' (Off), and 'Output' levels (-2.8 and -2.6). A zoomed-in view of the impulse response is shown on the right.

The transport control panel features standard playback controls: Stop, Previous, Play/Pause, Next, and Record (red dot). It also includes a 'PUNCH' button, a 'LOCK' button, and a digital timecode display showing 00:01:48:16.6 (SMPTE) and 00:00:00:00.0 (SMPTE). A progress bar below the timecode shows the current position in the project.
