I considered it. I use other NI software and like it.

But it's priced at more than a Digitech GNX4 or Line 6 PODXT Live, both of which include decent amp modeling, FX modeling, foot control, and integrated audio interface to computers for less than the cost of the NI solution.

And with the Digitech or Line 6 you don't have to drag your laptop to a gig.

Plus, the GNX4 adds a 6 hour (if you get a 2GB CF card) looping, mp3 playing and 8 track recording capability with an integrated mic pre, and the PodXT Live offers digital connection to a Variax.

However for studio use, recording and reamping the NI product looks like it would be very useful. Except that I already have Guitar Amp Pro for that (with Logic). The Digitech and (I think) XT Live also do reamping via USB.

The GNX4 has been great for gigs.

Cheers,
-Jamie

Was it Guitar Rig or Guitar Rig II that you considered? The new version has an integrated audio interface, in a much improved Rig Kontrol. But one of the main things that attracted me was the new "Loop Station". I already have a POD but I'm not that into it's sounds when it comes to recording.

I agree, that for live use it's a bit of a drag to rely on a laptop 100%.
How do the GNX4 amp models sound compared to Guitar Rig II?

I considered GR1 and decided against it. GR1 had really limited control

hardware. Then I considered GRII when it came out. GRII looks more usable.

Looping is one of the things on my list. The GNX4 has looping features plus an 8 track recorder. I don't know if GRII's "Loop Machine" feature is better or not. The description is pretty sparse on their web site.

The GNX4's looping is simple. Hit the record button and off you go. Countdown is optional. Hit record again and it loops, or hit play and it loops but you can record your next part on new tracks (up to 8 tracks, although any track can be looped over with multiple overdubs so you can have many more than 8 parts looping).

It has undo and, if you like, a drum machine (plays back any MIDI file using internal drum samples). It can quantize the loop point to the nearest 8th note. What the GNX4 does not do is allow building up different sections (like verse and chorus) and switching between them on the fly. You loop one section and that's it.

I have the extra pedal for controlling looping, which keeps the main footswitches free for switching amps and such. Except that it still requires a bit of dancing on the main footswitches to get to a new song for clear looping, or on the remote switches to delete the last loop tracks in order to start over.

Having never played GR, I have not compared the amp modeling between GRII and the GNX4.

Overall I have been happy with the GNX4. I like that it include both stereo XLR and 1/4 stereo outputs and that it can mix guitar, mic and two line inputs. I like that it uses robust CF media for recording, looping and playback, so I don't have to depend on a hard drive at gigs. The GNX4 includes very playable amp models and the FX are decent. Setup at a show is quick and uncomplicated (well, it was until I added a guitar synth to the rig).

I have a wish list for the GNX5, which I've discussed with Digitech...

Cheers,
-Jamie

Thanks Jamie, much appreciated. On a side note, how do the looping functions of the GNX4 compare to the JamMan pedal?

I haven't used the Digitech JamMan.

Just looking at the specs: With an additional 2GB CF card it has the same max memory of 6ish hours. With the optional pedal you can switch to entirely different loops, but I don't know if you can do that on the fly without stopping the music. If you can, that would be a big plus.

OTOH the GNX4 can loop stereo tracks, the JamMan is mono.

GNX 4 is about \$550, JamMan about \$300. You get a lot for the extra \$150 - amp modeling, FX modeling, stereo XLR output, 8 track recorder, expression pedal.

But if you already have that stuff covered, if mono is OK, and especially if the JamMan switches loops on the fly, it could be a useful box.

The JamMan comes with a 128MB CF card, I guess that'd be OK for the first week or so. :^) The GNX didn't come with a throw-away dinko card like that, so I went right to 2GB.

Cheers,

-Jamie

I think I'm going with the new Boss RC-50 Loop Station:
<http://www.bosscorp.co.jp/products/en/RC-50/index.html>

(Gotta wait till it's released here in Oz)

Looks cool. No downloadable manual yet. I wonder if the three phrase channels would let you live-switch between song sections?

Let us know how you like it.

Cheers,

-Jamie
