I'm looking for an external ribbon cable to an older 32bit Magma chassis.
The cable is an 80 pin microcentronics (MC80) and the part name is CBL2PCI.
It's a 3M branded connector.

Calls to Magma have been about as useless as tits on a boar hog. I spent the
best part of yesterday trying to source one on the net with no luck. Any
suggestions as to where to find one or how to build one would be welcome.

Thanks,

Deej

I need one as well. If you find a source please report back.

Hi DJ,

This guy said he could build one for me, but he wasn't sure of the specs
and couldn't guarantee it would be right.

bobp at sierratechnologies dot com

Maybe if you could send him pictures of one, he could comment on it with
more confidence.

He wrote, "Pricing would be \$61.65 for a 1.5 foot cable and it could ship
in 3-4 days ARO".

Hope this helps,

Mike

Dear DJ,

Search for scsi MC80

I found some hits there.

It is a scsi connector cable thing.

Hope this helps.

Regards,

Dimitrios

Thanks Mike,

I talked to Bob and it looks like this may happen. I've got a dead Magma cable here and I'm going to send it to him so he can check the pinout. It's likely a straight through situation. He should be able to take it from there.

Appreciated.

Deej

Hi DJ,

I'm glad I could help. I researched the shit out of trying to find one someone who sold/made them, and Bob was the only guy I could find. I ended up paying \$120 for a used one because I couldn't get the specs from Magma to give to Bob.

Would you mind posting the specs when you get the new cable back from Bob?
I'll probably order a spare from him just in case mine bites the dust.

Cheers!
Mike

No way dude.....I'm going to corner the market on these, advertize them on EBay and make a killing off all the poor schmucks like you and me who have bad Magma cables and then I can retire. It's gonna cost you \$250.00!!!

(seriously though.....I'll be glad to share this ;o)

Bob said that to the best of his knowledge, the 80 pin microcentronics cables were wired straight through. Guess we'll find out soon enough.

Thanks again for the lead on this. Hopefully it will work.

;o)

Hello

I'm in need of an 80 pin cable for my Magma box, too. Would appreciate a
contact where I could get one, too.

Thanks

Craig

I'm beginning to think the older models used a flat scsi iii type cable male 68 connectors.

If you look at the pix for the newer 32bit model it shows a round cable.

Hope this helps,

El Miguel

Hi Migel,

I'm not sure when, but at some point, Magma switched from custom made 80

pin ribbon style cables to connect the host and system cards to a standard 68 pin scsi cable. Unfortunately, people like me got "great" deals on the older style of chassis, only to run into the severe shortage of the older cables. Magma doesn't sell, support, or even provide specs for the older cables anymore.

Hopefully, DJ will report success in having one custom made.

All the best,

Mike

Rats, too bad. When I purchased a pair of older Avid Magma 7 slot;
I got heavy flat type cable but the 3M connectors count are 68.

dunno know if I'm lucky or what?

Regards,

El Miguel

I'd count the pins again. It sounds like you've got the 80 pin cables. But,
I'm no expert.

Let's hope, for your sake, that they are 68 pins. Much easier to replace
the cables that way.

All the best,

Mike
