[View Forum Message](#) <> [Reply to Message](#)

Hi All,

Thanks so much for all your kind words, patience, and encouragement over the past several years. I've added the 32/64 bit driver installer to my webstore. I'm sorry that the website is so crap, but there is so little time, and I'd rather fix PARIS code than the site.

https://ensoniq.ca/product_info.php/cPath/27/products_id/44

I started working on the ASIO driver again yesterday, and I have big plans for it.

I hope this helps keep PARIS current for as many of you guys as possible.

All the best!

Mike

I just would like to clarify if Paris 3.0 at this time wont run at all on a 64 bit win7 platform because of the pace incompatibility issue? I got Paris 2 up and running OK with Mikes help (thank you Mike!) I did try to install 3.0 and it does nothing. I tried to install the Pace driver from my Win7 32 bit build which is a bit older version but no go. Or maybe I just did it wrong. I understand I cant legally run it until the pace thing gets sorted out but was just hoping to see if it would at least run in demo mode for a period just to see how it did..
Thanks

Hi Jon,

I'm sorry to say, that under Windows 7 it was the PACE code itself that crashed for me. I didn't even see the demo screen to click past it.

I tried for two solid days to get it to work, and I got nowhere.

Sorry.

Mike

Thanks so much for all the support! There is going to be a maintenance update as soon as I can test one more system. I found a bug this morning that affects some systems and not others. It's fixed. I also fixed an issue that prevented 8 in cards in the higher number MEC slots from being detected. I'll be email the new installer to everyone that bought it.

All the best!

Mike

I am going to buy the driver but I don't quite understand how to do this after all I am just a "Musician" Ha! Can I just upgrade to Windows 7 and add the driver or do I have to go through the process of loading Paris again? I have the latest Pace driver. By the way I bought the latest Slate Virtual channel and it is GREAT!!! Talk about having the fatness of Paris and this Slate VCC is unbelievable!

Subject: Re: PARIS Win7/Win8 32/64 driver package available now!

[View Forum Message](#) <> [Reply to Message](#)

Hi Ron,

The new installer includes options for installing PARIS 3.0 and 2.1. So, you don't need the original installer anymore. However, because of the PACE copy protection embedded in PARIS 3.0, PARIS 3.0 will not run under Windows 7 64, even with the PACE driver installed.

If you wanted to use PARIS 3.0 on a 64 bit windows, you could contact ID and see if they will give you a pace free copy or permission to remove the PACE copy protection yourself. They wouldn't even address the question when I contacted them.

I hope this clears up your questions!

Mike

PS - I'm checking out vcc demos right now.

I ordered the driver today. I have a question. If I pick the 3.0 version do I have to get the license from Intelligent Devices for the Paris program to get it up and running again? And, if I already have the latest Pace driver do I have to reinstall it?

[View Forum Message](#) <> [Reply to Message](#)

The Slate VCC is a very interesting plugin. I've been using it for a week and I like some of the sounds. Like most amps, the more you drive it the more saturation you hear...so there can be

some distortion...good or bad...depends I guess.

As for the character of the different consoles they do have their own different flavor...but at some point you'll find that if you can hear the contrast...it might be too much.

I like it because it can give a track a little more warmth and presence making it easier to mix. I think it's nice to have.

Subject: Re: PARIS Win7/Win8 32/64 driver package available now!

Posted by [ronj_91602](#) on Wed, 22 May 2013 15:29:14 GMT

[View Forum Message](#) <> [Reply to Message](#)

I find that the VCC is really good on vocals if you want to get it really out front and full or if a guitar or bass part is a little wimpy it will put in your face with warmth. I've tried it on every track and it tends to get muddy have to watch the saturation. But when you are used to the warmth of Paris it just adds a little edge and analog headroom

Hi Ron,

If you're just going to update the driver on an existing 32 bit PARIS system, I don't think it will affect the PACE activation that is already in place. Just make sure that you de-select the PARIS 3.0 option in the installer.

If you're installing PARIS on a new 32 bit system, you'll need to install the PACE driver (I'm not sure if it being the latest/greatest matters) and send ID the challenge code that comes up.

On a 64 bit system, the PACE code embedded in PARIS.exe does not work, even with the latest/greatest PACE driver installed. In fact, not only did PARIS not work, the PACE driver broke my Windows 7 64 system so badly that I had to reinstall Windows from scratch.

I hope this helps!

Mike

[View Forum Message](#) <> [Reply to Message](#)

Just a quick comment in response to the "what next" - I have one suggestion to make:

If the PARIS driver could appear as an ASIO host then it could communicate with a program like "Jack" and pass audio to and from other applications without the need for an additional sound card to stream Adat (for example).

I don't know how much additional work that would be, but seeing as Jack already exists, maybe it would not be so much work.

Obviously being able to natively access Paris via some kind of Reaper extension would also be awesome, but I wonder if this might be a quicker result?

I'm not a lawyer, so don't rely on this. But today's legislation is specifically designed to grant safe harbour to the removal of copy protection which blocks legitimate ongoing use through obsolescence. So the unintended consequence of this release is to checkmate inaction.

Hi Ron,

I have no idea what, if anything, would get ID to help us out.

The last time I heard from Edmund, I felt I was treated with contempt. I'm not saying that's what Edmund intended, but that's how it read to me and how I felt. I'm not going to put myself in a position where I'm repeating that kind of negative interaction. So, I don't see myself contacting him again. He may surprise me and send me an email with all kinds of great things - he may even apologize - but I'm not expecting anything.

In short, do whatever you think is best.

I've been completely swamped with web work for the last few weeks, and I probably will be for the next month or so, but I have started moving more of the PSCL into the scherzo. This is for two reasons: 1) It should have been there in the first place 2) I'm trying to get a deeper understanding of how the application programs the effects into the EDS cards so I can write my own library to do it. I'd then use this in the ASIO driver and whatever comes next.

While I have very little hope that anything more will come out of ID, I'm not crying over it. I'll just carry on.

I really like the PARIS app, and I'll keep using it until I can write a killer ASIO driver that does zero latency monitoring, C16 control, and loads the EDS effects. That's what I'm looking to do.

All the best!

Mike

[View Forum Message](#) <> [Reply to Message](#)

Hi Ron,

Since you're on a 32 bit Windows, you can just install the PACE driver and use the PARIS 3.0 CD to install PARIS 3.0 and contact ID for the challenge response.

You may not need to use the PARIS 3.0 CD. The PACE driver and my installer may be enough. I had to reverse engineer what the installer did, and the PACE part is obfuscated by design, so I have no idea what I might have missed there. I had a commitment from ID that they would provide a PACE free version 6 months before I released the driver, and it never happened. I didn't expect PACE to be an issue still.

I hope this helps.

Mike

Let ID know you're transferring your PARIS 3.0 license from one computer to another (as is perfectly acceptable) and need a new license code (this is of course free). Include your challenge code and maybe let them know you've started the seven day "clock" on the PARIS 3.0 demo on the new computer. Best to do this right away if you haven't already.

Hi Ron,

Would you mind posting the specific configuration of your system?

I'm still running Paris on XP, but would like to try it on Windows 7. Considering all the variables when building a new system, I'd like to build a machine with parts as close as possible to a system that is actually working. I would love to build a machine with the latest released cpu/ram, but would like to build a system that is actually compatible with the new driver.

Mike, maybe you could post your machine's configuration? I'm talking about model numbers for motherboard, CPU, RAM, etc.

Mike, I have to commend you on your efforts to keep Paris going. It's pretty incredible.

Thanks for any help guys.

Luiz

Hi Guys,

Sorry I've been slow adding to this. I'm just buried in work.

My motherboard is a Gigabyte GA-MA790GP-DS4H with 8 GB of Kingston DDR2 1066 RAM and an AMD 95 watt 1055t CPU. I'm using the Virtua Via ATX kit expansion chassis. My OS is Windows 7 Professional 64 bit edition.

I've tested the driver with 4 cards, but there is no reason that I know of that it will not work with 8. I'd be happy to help troubleshoot and fix any issues that come up. The biggest thing would be having interfaces on at least every other card.

All the best!

Mike

[View Forum Message](#) <> [Reply to Message](#)

My system is a Gigabyte P55-UD3R with i7 860 processor and Crucial XMS3 Ram (2x 4gb currently), Antec truepower PSU and have used both Gforce 460 graphics as well as a cheaper Radeon. Also have Texas Firewire card installed.

All working perfectly here on Paris V2.1. Haven't tried 3 but am sure that would be fine. For some reason my version 2.2 didn't want to work with the new driver package on either 32bit or 64bit, I have a feeling that you need to use the packaged installers with the new drivers.

I have also tried in my VirtuaVia ATX expansion - all good.

Only problem I have had is I can't get my Pulsar 1 card to work with the system - so it looks like I may have to get an RME in order to be able to stream audio to from Paris/Reaper....

Wouldn't it be great if in the long term we could somehow do that via the Paris driver ?
Anyway, for now it seems as if the new driver is seriously rock solid on both 64bit and 32bit windows.

Hi

Just to say that paris 2.0 + win8 + virtuavia (atx) + rme raydat (in the computer) + 2 eds cards (virtuavia) + 1 scsi card (virtuavia), and 2 mecs works fine here (32 ains and 2 adats).

Can record 32 traks with no problem.

Had to play with the pci slots on the asus motherboard and the virtuavia chassis (irq troubles between scsi, rme, eds, and wifi) but once you have it, it's solid.

only wish : paris 3 !!! it's weird to downgrade to 2.0 (started with 3.0). Any english 2.0 manual anywhere ?

Hi Ron,

I'm running PARIS on Windows 7 x64. The PARIS app can only access 4 GB, but the PC can access more.

The only issue with 64 bit Windows is that ID hasn't released a PACE free version of PARIS 3.0. So, if you're in a jurisdiction where breaking digital locks is illegal, you have to use PARIS 2.x.

This is why I am chomping at the bit to get back to working on a full featured ASIO driver. Work and looking after my little girl just haven't left any breathing room. But, that will change. I'm too stoked about this not to do it.

All the best,

Mike

Thanks Mike, by the way I am running 3.0 but at 32 bit. There are some glitches especially on recognizing pace plugins but I have devised a way around that by answering no to everything and it will go ahead and load the pace programs. I didn't have that problem till I had to introduce the ilok 2. I updated the driver but still minor glitch. I don't know if it just me but PARIS seems to be allot more defined and cleaner running on windows 7

I have been running Paris 3.0 on Win98. I tried installing driver to run on XP (I have both OS on my computer) was never successful.

Can I run 3.0 on a computer with Win 7.0? Someone wrote the driver for that?

My current computer is 12 years old and parts are starting to go on me. I was going to upgrade the computer and then try running Win98 virtually. I was thinking that might be an improvement (I sometimes get resource constrained with my current system. Even though I have at least 2GB of RAM, I think 98 can only see/use part of this.

Also, when my computer guy cloned my hard drive and tried to see if he can run Paris the challenge code was different than what I had the response code so, how do a get the response to this new challenge?

Thanks for any responses.

Stephen

I like running Paris on win 7 pro 64. That way I can use Reaper 64 with new plugins, VSTI and sequencing.

I haven't used Paris 3.0 but so I don't know what I'm missing.

How did you get Paris to run on Windows 7? Didn't you need drivers for that? If so, are they available? Then I can completely avoid this whole tactic of trying to get a virtual version of Win98 to run on a new pimped out machine.

Also, ID = Intelligent Devices? to get the new response code that I apparently need? Is this who I need to contact:

Intelligent Devices
300 Redland Court #204
Owings Mills MD,

[View Forum Message](#) <> [Reply to Message](#)

Hi Sassonsb,

I spent the better part of 3 year working part time to make PARIS run under Windows 7 64. Initially, Intelligent Devices was supportive. They gave me permission to write a new installer for PARIS (the original is 16 bit and won't run under 64 bit windows), Edmund Pirali did his best to answer questions, and then things changed. He stopped responding to my emails and didn't deliver the promised PACE free version of PARIS 3.0. I'm not sure why this happened.

I released my installer anyway, even though PARIS 3.0 will not run under Windows 7 64 because of the PACE code that is embedded in PARIS.exe. I'm still hopeful that ID will release a PACE free version of PARIS 3.0 eventually, and people can just swap the PARIS.exe file when that happens. PARIS 2.x works fine under Windows 7 64, with the exception of 32 bit MTC, which has been broken for years without anyone noticing.

I'm upgrading the store software, so I'm not actually sure if this works yet, but you can read about the driver and the installer here:

http://ensoniq.ca/catalog/product_info.php?cPath=27&products_id=44

With my driver, you can use PARIS 3.0 or 2.x under the 32 bit version of Windows 7, and you can use PARIS 2.x under the 64 bit version of Windows 7 64. If you want to use PARIS 3.0 under Windows 7 64, I encourage you to contact ID and politely ask them to provide you a PACE free copy of PARIS 3.0. Maybe if enough people ask, they will deliver it.

All the best,

Mike

[View Forum Message](#) <> [Reply to Message](#)

First of all, I want to thank you for the time and effort you put into creating the drivers so that Paris will work with more advanced operating systems. I love Paris and don't want to switch to another program. I keep hoping that someday someone will buy the rights and bring back to the market. I, for one, would be willing to invest.

Anyway, I have all the 2.x versions and the 3.0 version. Since I'm only starting to design my replacement computer, I could go with 32 bit although I would prefer 64. Question though -- If I created projects in Paris 3.0, will I have problems opening them in 2.2 if I go with a 64 bit machine.

I will also add to the effort to encourage ID to provide more support. Obviously, there has to be something in it for them to do it so maybe we can probe to see what that might be.

Hi Stephen,

You will have problems opening 3.0 files under PARIS 2.x.

As for getting help from ID, I don't know what that will take. When the PARIS hardware was discontinued, ID kept working on PARIS. I don't know if it morphed into part of their law enforcement software, or if it is just a more advanced, software only audio platform. But, they are not going to give up the code with out some big dollars as compensation.

Maybe we could pay them for a PACE FREE PARIS 3.0, but Edmund wouldn't even answer my question when I asked if I could just have permission to remove the PACE myself. I suspect there is some kind of crisis over there at ID, and we're not going to see any movement from them until they get through it.

My plan is:

- 1) move the hardware initialization and communication code from the PSCL into the scherzo (partly groundwork the next step).
- 2) figure out how the effects get loaded into the eds cards, and write a framework to manage that to replace the Ensoniq code that went missing when they closed.
- 3) write a GUI in Qt to replace all the functionality in PARIS 3.0 that relates to the hardware (effects/mixing/patching/etc).
- 4) combine all this with a low latency ASIO driver so that none of us need ID or PACE again.
- 5) port the ASIO/Scherzo bundle to other platforms (FreeBSD/OSX) so we aren't screwed if Microsoft really starts to marginalize the Desktop.

This is going to take time, but I assume that we're all in this for the long haul at this point.

All the best,

Mike

[View Forum Message](#) <> [Reply to Message](#)

After reading these replies (thank you), I think that I'll build a new computer with 32 bit which will allow me to install Paris 3.0 I may have some questions about how to install the driver to run this in Window 7. I have the Paris 3.0 disk and a challenge/response code that worked when I upgraded from 2.2 about 5 years ago. It sounds like I may need to contact ID for a new challenge/response code now that I'm moving it to another machine. Hopefully they will cooperate/support otherwise I've wasted my money on a new computer. I'm also assuming that a new computer (including Windows 7) will offer some advantage over my 12 year old computer which has decaying parts.

Any other advice as far as do's/don'ts regarding the new computer would be much appreciated. Obviously I'll need two PCI slots for my two Paris cards. I was going to install a solid state hard drive for software and then a separate hard drive for music files. I've been using a dual monitor so I was going to put in a graphics card that would allow me to continue to do that.

Thanks for any additional advice.

Stephen

ID will give you a new code. I think they give new codes out on Thursdays so if you get in touch with them you should have it by the end of the week. They are very nice and will take care of you. I am running on 3.0, 32bit windows 7 and am very happy at this point but would be very happy at 64 but am way ahead of windows 98. Thanks to Mike it just keeps getting better.

[View Forum Message](#) <> [Reply to Message](#)

Thanks so much for the kind words, guys. I actually got a couple of hours to work on the driver last night, and I hope to do more this week. I feel confined when I can't work on it.

On a side note, I sent emails to three or four of the original PARIS guys from Ensoniq today to see if they would do some email interviews. I hoping they'll be okay with sharing some of the history with us. I'll let you know if I hear back from them.

All the best!

Mike

Mike,

I can live with what I have now (3.0 on Win98) for a while longer if you think 64 bit will have noticeable advantage over 32. I know you can't commit to a timeframe but, what's your best guess?

Thanks. Stephen

Do you know/remember Chris Ludwig (East Coast Music Mall with Morgan)? He got me started with hardware/software and I made recent contact with him. I may ask him to help me put this together since I'm lacking in technical skills.

[View Forum Message](#) <> [Reply to Message](#)

I really don't dare guess at timelines. It's going to be a while. I'll work as fast as I can, but there is a lot to do and I, unfortunately, can't work on this full time.

I'd contact ID to see about a PACE free PARIS 3.0. Maybe if enough people bug them, they'll just do it so people will leave them alone.

I really, really like PARIS under Windows 7 64.

I hope this helps.

Mike

Mike,

From your perspective, what is the main advantage of running Paris with Windows 7 vs. XP? Here is a response I got from the person who built the computer for me and installed Paris 12 years ago:

"If you are getting a new system built it will be "newish" hardware.

Current Intel chipsets no longer have native PCI support. The PCI bus is no longer connected to directly to the chipset. This leads to performance and compatibility issues with new PCI interfaces as well as old ones.

The most recent Intel chipset that that had some decent PCI support was the P55 and x58 chipset. Both of which are around 4 years old. You can still find the CPU's and motherboards though.

You will have to use Windows XP SP2 32 bit or higher and will need to disable Hyper-threading on the CPU. I would not get more than Quad core. Ideally I would try and find a Dual core.

I think the current AMD COU/chipsets still have native PCI support so that might be an option also. But same goes for them. No more than a Quad Core, XP SP@ or higher.

You might find one of these boards still that have 3 PCIs. But in many cases all 3 will not be usable for EDS cards."

What are your thoughts about the concerns mentioned above?

Thank you.

Stephen

[View Forum Message](#) <> [Reply to Message](#)

Hi Stephen,

I'm using one of these:

<http://www.virtuavia.eu/shop/pcie-4-x-pci-expansion-atx-kit.html>

No PCI bus necessary.

I'm also using an AMD setup:

<http://kerrygalloway.com/ParisForums/index.php?t=msg&th=15446&start=0&>

As for XP vs. Windows 7, XP support ends in April, so it won't be safe to put it on the Internet after that. Also, it lacks trim support for SSD disks, so they wear out faster.

More than anything, though, I find 8GB of RAM wonderful for overall system performance.

I hope this helps.

Mike

[View Forum Message](#) <> [Reply to Message](#)

For what it's worth I looked into the compatibility issues of current chipsets which used bridged PCI vs slightly older systems that have genuine "native" PCI.

As a result I went for a Gigabyte P55-UD3 which has 3 native PCI slots as well as support.

You can put an intel i7 870 or 860 on that board, and the have a very upto date fast system, with the best of both worlds; you have floppy and IDE support but also SATA and even USB3 if you get the UD3R.

However Mike's use of the Virtua via proves that even "bridged" PCI will work with Paris - I just decided to play it safe at the time I was putting my system together.

Anyway, I hope the above may be useful to you. I bought my board and processor 2nd hand on ebay BTW

Posted by [Kim W.](#) on Sat, 16 May 2015 10:24:12 GMT

[View Forum Message](#) <> [Reply to Message](#)

Mike's new driver works very well with 64 bit windows 7 here. (And 8, I think, although I don't use it).

The ASIO driver is a separate project.

It hasn't been released yet, but Mike is working hard on it, and reports that in its current state, works with Protools and other DAWS. It is multi-mec capable, and is capable of (I think..) 24 simultaneous audio streams. He still has some more work to do before he releases it.

If you search through other topics in the forum, you'll find more info.

I think you'd be very happy with the 64 bit driver.

It's also very easy to install.

Hope this helps.

Kim

[View Forum Message](#) <> [Reply to Message](#)

Hi Kim,

Thanks for jumping in for me.

The ASIO driver is separate. I'm still working on it. It's taking longer partly because Pro Tools was such a pain to work with and partly because I have so little time.

I'm also spending time trying to get PARIS 3.2 to work.

I guess most people don't know - Edmund gave me a PARIS.exe that he asked me to check to see if it was PACE free. It didn't work. With Kim and Kerry's help, we've managed to get it to the point that it's about to switch from the plash screen to the main window before it crashes.

Here's a screen shot.

I have no idea if we're going to get this to work, but we sure are trying.

That's the latest...

Mike

[View Forum Message](#) <> [Reply to Message](#)

Question on the ASIO driver. Will us lowly Just Paris users also use the new driver ? I do everything that I need to do except the final mastering because I can't use my Waves VST plugins with my Paris. 64 bit running on windows 8.1. Kerry suggested to use a wrapper,[Yo Yo] before I install my VSTs but like someone else I got this config. nuclear explosion and had to reload Paris and the rest of the garbage,... effects etc. So I bounce a stereo file and bring it to my other

computer and use sound forge studio one to use my Puej Compressor [or however you spell it]. and my Kramer tape plugin. They both help add the final glue to the mix without obliterating that Paris sound. I have almost a years work of solid work on material that I am totally paranoid about messing up. However it would be so much easier and maybe even better if I could just do everything in Paris. Import a stereo file into a new project and use the plugins on them, do gain changes etc. Does anyone actually have new waves vst plugins working in their Paris setups? I don't know how to run the wrapper or really where to install it, or do you just unzip it and let it do its' thing? Do you still point Paris to the vst file location? Sorry I am so out to lunch on some of this stuff. I am one of those who is all about the sound and not the C++ stuff. If anyone is interested in a really Sweet soundcard that does not break the bank, I just got an ASUS essence STX 2 in my mixdown computer and it works and sounds GREAT ! Not just for gamers! As usual any knowledge tossed this way is always GREATLY appreciated. I tried to put my effects library on here for different presets and I don't know if I did the correct thing. I am sorry my presets names might be a little weird, but I make the preset for a certain song so usually there will be one word from the title in my preset name. It makes sense to me, but I understand my madness. I have spent A LOT OF TIME WITH THE VERBS AND PARIS COMPRESSOR, I think I have some nice verbs, If you are just surfing just try one and see what you think. If I did not upload the correct file let know and I will try AGAIN, and let me know where I messed up. Enough for know, fingers are getting soar !

Richard, the ASIO driver is for using the PARIS hardware within different software.

So you will be able to bounce the PARIS mix, import it into say Wavelab for mastering or record into PARIS then bounce the wav's into Reaper and use modern plugs, then import back into PARIS for mixing, all using the MEC playing the audio into your speakers.

My current workflow has me producing in Studio One V3 or Live 9, record in PARIS, premix in Reaper with Nebula, then mix in PARIS or Studo One, and master in Wavelab all using the PARIS MEC!

Mike is a mad genius, we are lucky to have him!

Ok I am giving it the Old college try ! If the presets are there, the names usually have a word from the song title. Stand by, would be for Stand By me Etc. If you want to try them feel free. I hope someone finds something useful in my madness. If I didn't do the right thing let me know, I will try again. Uggggg 12 straight hours of working in Paris, NO crashes but I have had enough for one day!
