I have seen this topic come up a few times on the internet however I have only come across dead links. Does anyone have a lead or could anyone point me in the direction of some kind of patch or 105/ scherzo that might allow me to run PARIS on XP I have PARIS 2.2. I believe I have a license for 3.0 but have yet to install until I can resolve this to the infinitely more stable XP. Win 98 is simply a drain on my patience.

Thank you,
Andrew

Hi Andrew - the Wiki has further info. Try this link on setting up and configuring PARIS with XP.

I'd strongly recommend you buy Mike Audet's multicore drivers as a start, whether you intend to go multicore or not - the cost is trivial compared to the bang for the buck. Mike's drivers come with Mike's active and diligent tech support, and he'll get you up and running quick. They've also killed some of the issues (difficulty in recognizing multiple ADAT cards, for example) that accompanied the freeware XP drivers.

I guess this answers my question.
Has anyone use this with success?

That's the ones. I'm using them myself - great work by Mike, an avid PARIS hobbyist, and now professional coder.

Ditto. Mike Audet's links are not working. Want to get the xp drivers if anyone can point us to where?

Exited about the notion of Paris working under Windows 7. Might get a few converts from Mac users stuck in os 9.
Thanks

Hi Imajon,

Same here...

FYI Mike's website is online. I emailed him re his paris multicore drivers and he said that it seems to be working well on WinXp 32bit and Win7 32bit. He is still working on the 64bit drivers and hopes to get that finished soon.
