...with a redesigned Scherzo.

If I can get through a few listens without crashing, I'll post a beta.

So far, I've started it several times with no "Tom's Hardware" utility, and the C16 seems fine.

I moved the code that copies data to and from the cards into the interrupt service routine, which should resolve the threadsafety issues. I wasn't able to move some notification code into the ISR, though. The code lets the app know that some data has been sent or received by the Scherzo. Microsoft doesn't allow setting events in an ISR. This matters because I won't be able to create as tight a buffering system as I had hoped for a low latency ASIO driver. It's just the way it is, I guess.

I'll let you know how this goes.

All the best,

Mike

Mike,
First off,thanks for all your great work with PARIS. Is it possible to add
Rewire to PARIS? I know your work has been with the PARIS hardware,but if
there is anyway it would be awesome!
I know that Propellerhead has some sort of developers kit that they offer.
I can hope for a minute.

respect
Nappy

Or maybe a MAC OSX low latency driver for the hardware.

Hi Nappy,

Anything is possible. The more I learn about the code, the more I realize
I can do.

The immediate plan is for finishing up the scherzo and then working on the
PC ASIO driver.

All the best,

Mike

Hey Nappy

I guess that you got it up and running, huh?

Not the Mac side yet. I need help. I'll e-mail you about it.

respect
Nappy
