
Subject: UAD-1 Meters not working
Posted by [highmtn](#) on Wed, 03 Dec 2008 08:51:47 GMT
[View Forum Message](#) <> [Reply to Message](#)

So I've got my PARIS rig working again. Plays back 64 tracks without a hiccup. Had to replace both hard drives, do a PACE reauthorization, etc...

Now I'm running into trouble trying to get my UAD-1 working right. It's functioning correctly, but the wrapper doesn't seem to be doing its job. I've tried loading UAD-1 version 2.1, and also version 3.0, both of which have worked for me in the past. I'm using fxpansion 3.3, and have also tried 4.05...

I've removed the programs and reloaded over and over in just about every combination, including fresh loads of PARIS 3.0, UAD-1 2.1 and then later with 3.0, and tried each UAD version with each version of the wrapper. I've done the tweeks in the PARIS.cfg of "EDStransfer=8,8" and configuration to disk I/O to 128k. I just get the dark sand-colored background versions of the plugins, with non-funtioning meters. The compressors and EQ's are working, just not displaying that they are working. Yes, I've pulled the card out, loading software before installing the card.

I'm guessing that in PARIS configurations under "Set VST path" it is wanting me to give it "C:\Program Files\Steinberg\VstPlugins\PoweredPlugins... So I've done that as well, but no joy...

This is on a 1.9 Ghz athlon running ME on a 4-EDS card system.

Has anyone else had to figure this out lately? I could use some words of wisdom and/or encouragement. I read in an older post that UA does not support PARIS calls for help. I'm probably just doing one step wrong each time I go through this. DOH!!!

Thanks for listening.

Bob H.

Hi Bob,

It sounds like you're using the unwrapped versions, despite having the wrapper installed. Try digging through the effects list. See if they are showing up twice, possibly with "VST" added to the beginning of the plugin name. I hope this helps.

Mike

Mike,

It's something wierd like that. I've seen the two versions in the distant past, where only the second one really worked, but that was before this current dilemma.

On one of my recent attempts last night, I got PARIS up and brought up a project. I was thrilled that the plugin on the PARIS mixer native area showed "VST UAD-1". When I clicked on the device on the mixer plugin area, it displayed properly (A GRAY BACKGROUND instead of the sick greenish-brown sand-colored background. I ran audio, but darn it, nothing was compressing. To my dismay, I saw the UAD-1 lying next to my PC. I had forgotten to reinstall the card on this try.

Not to be defeated, I shut down the computer, installed the UAD-1 card, and brought the whole thing back up. The LA-76 was still installed on the channel, and I still had the gray background. The compressor was working. I closed the LA-76, then tried to bring it back up just to make sure I was successful. What a bummer. It was puke brown background again, and the compressor worked, but no metering. Back to square one. No meters, no working, accessible VST.

I don't know what I'm doing wrong, but hope I don't have to go all the way back to formatting the drive and starting from scratch. I had a heck of a time getting this system playable again.

I know the problem is the nut behind the wheel, but I can't seem to find where I'm steering off the straight and narrow.

Thanks.

Bob H.

My experinces may be irrelavent now since so may advances have been made by Mike, but IIRC, back when I was a Paris user and using UAD-1 cards, it worked best for me when using the FXpansion v3.3b2 wrapper. This has been discontinued for years and has been posted to this group before so I'm attaching it again for your convenience. It whould work with UAD-1 cards as a VST>DX wrapper and you should be able to have full functionality of your UAD-1 presets and meters.

Subject: Re: UAD-1 Meters not working
Posted by [highmtn](#) on Mon, 08 Dec 2008 10:40:01 GMT
[View Forum Message](#) <> [Reply to Message](#)

Deej,

Thanks for the wrapper file. My system is up and functional now, including the UAD-1 and meters on the VST compressors, in spite of me. I really struggled with getting the VST up and staying up. I guess it was confusion as to the path to the dll's. I kept thinking in PARIS under "Set VST path" the system was asking for the C:\program files\steinberg... blah, blah... and I kept trying that to no avail...

but it just wanted a good, fresh wrapper, and any old path under the sun. Much like when you start to record and it makes you give a recording path, but doesn't seem to really care what the path is... When I loaded some of Chuck Duffy's patches like No Limit, and Barb EQ, it would blow away my VST again, and I would have to go through the wrapper install and the mindless VST path. The wrapper would blow away at the slightest hiccup, and need to be reinstalled. What a pain. Since this was a "from the ground up" install, the order in which various peripheral programs were loaded, like the skunkworks plugs, seemed to shoot holes in my VST. I ended up deleting the EQ pack because PARIS started crashing after I installed and tried to use it. After that and another round of loading wrappers and setting VST path, whattaya know... it's all working. For now. ;^)

Like I said, the problem is the nut behind the wheel.

Thanks for the help, folks.

Bob H.
