Hi All

This warning C0000005 04b5d520 has started showing up when trying to open a song - crashes paris and the computer...re load paris, open up the same file and it loads no problem

Any ideas what this is all about

Don

Now this is just weird...this will crash the computer (auto restart) and when I relaunch Paris and try the same song again it opens up with no problems.

If it keeps auto restarting, it's a virus.

Pace isn't on board and the only new stuff added to the computer is networking to the other (cubase) rig but I'll run a virus check on it just to be sure.

Hi Don,

Check out the free system scanner at www.bitdefender.com.

It's probably one of the best out there.

Good luck.

Mark

I think I'm looking at corrupted projects as all the ppj's came from several huge wav files...six bands, six songs per band.

I'm going to go back to square one and start with each individual band's set and see what happens. Then I'll break up each set into songs again but

render each track as a new track and dump the old paf's

There's a days worth of work right there
