I rented a car from Hertz for my little sojourn to Denver last week. I had a big bunch of CD's for the trip but this car had a sirius system in it. I hardly listened to any of the CD's. What was surprising to me was that the programmers on this station pretty much had the \*\*\*\* down as far as I was concerned. It was very enjoyable.....and now I'm thinking that if I don't have this.....

This will also mean another Portico 5042 for the car... but luckily, they run on 12V! ;-)

Daveid.

and probably lightpipe it directly into the electrodes he'll install  
in his neck.

The hip hop, dancehall, and reggae stations are all very expertly programmed. And the rappers can curse, so I get to hear more of the song. I'm especially impressed with the reggae channel, which really mixes well know stuff (Wailers, Tosh, Jacob Miller) with a generous dollop of much more obscure titles.

I get it with my satellite TV and have a little list of the channels so I can change the channel without turning on my projector. Very cool.

Isn't this compressed to hell as in MP3?

Couldn't tell with the top down in the mountains across a PT Cruiser's =  
stereo but I'd bet it beats the choices available out in the sticks =  
where DeeJ is from :)  
I suspect it's more about choices than fidelity. On that note, does any =  
FM radio station not compress the living snot (as in smashed audio =  
through some rane 'broadcast' compressor set on nuke -it) out of any and =  
everything passing audio anyway?
