Hey Folks,

I'm starting to do more guitar reamping and loving it.

I started by going from an out card / aux to the amp and it seems to work fine. Is this a no no? Or should I get a signal coverter

like this;

<http://pro-audio.musiciansfriend.com/product/Radial-Engineer>

[ing-ProRMP-Studio-ReAmper-Passive-ReAmping-Direct-Box?sku=15 3933](http://pro-audio.musiciansfriend.com/product/Radial-Engineer)

TIA,

Lance

Heya Lance - it's not really a no-no in the same way it's not really a no-no to plug your guitar or keyboard into a PARIS "in". It won't fail to work - but it won't sound as good as it would if you used a DI or preamp.

The following is "as far as I understand it" - I'm not an electronics whiz, and the more knowledgeable are welcome to chime in with corrections. But as far as I know, a re-amping box is really just a DI in reverse (sometimes with some added features like a gain control). It does a few different things - it converts a balanced signal out of PARIS into an unbalanced signal, it lowers the line-level signal to a lower guitar level, and it changes the impedance to closer to that of a guitar pickup, which is much more compatible with a guitar amp.

From the more practical side, though, I can tell you this for sure - if you like the sound now, I think you're going to like it a *lot* more after getting that Radial (that's a decent one, and the price ain't bad).

I use the X-Amp from Radial. Really good.

Thanks Ted! Ordered one this morning and can't wait to start using it.

Best,
Lance

I just bought the passive version, the Radial ProRMP. We'll have to post some results when we have a chance.

I went with the passive one because I'd already shot out pretty much the entire series of Radial DIs (including the ToneBone) against a Demeter, an Avalon and a REDDI - the active ones are great but were just a tad "active" sounding (go figure) for what I wanted to achieve as a bassist, and I suspected the same might be true for the re-ampers. But on the other hand an active reamper might be just the ticket for retaining perhaps just a bit more sheen and sparkle in guitars (a lot of us bassists don't really like that stuff on our axes as much).

Whichever way, it's hard to go wrong - they'll just be slightly different flavors of completely solving any potential technical reamping problems.

- K

Yes -

I actually wanted a bit more "drive" out of it. I was worried about things losing life with all the routing, impedance issues and AD/DA. You're right though, anything from them will be really good.

Too bad Radial doesn't distribute Demeter any more.

So far, I like the gain knob on the box.
I don't notice any coloration compared to "active pickups" etc.
I'm a big fan of transparent sounding passive bass and the P90s
in my Gibson es330.
