Oram, and is projected to cost less, possibly closer to \$2,000.00! The production  
model doesn't even exist yet, so we will have to see how good or bad it is.  
having said that, I will go out on a limb here. There has never been an  
analog mixer of this quality at this price point. This will be a great mixer  
for project studios, and pro studios. This will be a more pro mixer at a  
project mixer price. They don't use components like this in Mackie mixers  
or A&H. This is a different level. Of course this all remains to be seen!

My guess is the bad stuff your hearing about the new Trident is about the  
Oram Trident, which IMHO doesn't surprise me. But I think you should hear  
the stuff for yourself.

As for Fletcher, well he has a tendency to be harsh and overly critical at  
times, he is a self proclaimed audio snob! He did post a retraction of  
sorts about the Toft mic pres, he actually likes them! I believe he was  
comparing the Toft to much more expensive mic pres. Allen Hyett posted Fletcher's  
retraction/explanation in the thread, you'll have to look for it and read  
it for yourself.

I know I made a comment about it being a great front end for Paris. My thinking  
is that it will beat something like a Mackie, not a high end mic pre. With  
16 high quality mic pres, 56 ch. of input for mixing down keyboards etc.,  
8 busses, and a digital I/O option, at \$2,000.00 it's hard to beat for what  
it is. The 8 ch Shadow Hills pre is a vary nice piece, it also cost about  
twice as much as the mixer I'm talking about, and you ca

James,  
UV meters are something new. Might keep the  
studio tan in check.  
T.  
"James McCloskey" <[excelsm@hotmail.com](mailto:excelsm@hotmail.com)> wrote in message =  
news:43626f92\$1@linux...

In my last post it should have read 56 input x8x2. =20

Although it is speculation on my part, I'm betting the toft mic pres =

are

going to be much better than the Oram mic pres on their version of the mixer.

Read the thread on gearsluts.com Allen Hyett tells what components they

are going to use in the Toft mixer. They also made customer changes on the

mixer design since the thread started. They added a mono switch, UV meters

and other things. It's amazing that a company would listen to customer requests

and make immediate changes to the design! Check it out.

Here:

[http://plasq.com/wormhole/Thanks Deej](http://plasq.com/wormhole/Thanks%20Deej),

I always build my own computers, so am comfortable with whatever needs to be done. I am currently running XP Pro with SP1, NTFS file sys. I use different drives for apps and data storage on this computer - that I have mainly used for video capture/editing/authoring/dvdburning. I have a 98SE computer also, but prefer to use XP if possible.

Welcome Edna,

Paris documentation is still available from:

<http://www.emu.com/support/welcome.asp?centric=653>

Paris was not officially updated for XP, so you will find no mention of later operating systems in the docs.

Several of the users here have returned to 98se or ME after having mixed results with XP.

I run a dual boot system that gives me both options, but I run 98 most of the time for Paris.

Gene Thanks Gene,

Quite a bit of documentation there - thank you. What do you avoid doing in XP with Paris? Are you using Paris 3.0? or does it matter?

If you search this site for "wormhole":

<http://tinyurl.com/afyz5>

You will find it well covered.

Gene ;-)-Hi, I'm a new user (almost) of a 20bit Paris system that came with EDS1000 card, MEC, C-16, cable and software. I got this system to record synth and vocals. I haven't installed the card yet or the software, and have a 2.6Ghz

P4, 1GB mem, on an Abit IC7-G MB with 2 ATA 100 120G and 160G drives under XP Pro. I also have a Peavy VMP-2 pre and NHT A10 monitors, mics, synth, cables, etc. I'm not sure exactly how to hook up these components (is there a diagram available anywhere) or if I will need other components besides what I've listed above. Do I really need the 3.0 software? I have downloaded the available files at Parisfaqs site.

Thanks much,  
Edna<http://www.crystalfiresw.com/products/wormhole.html>

If not, let me know where.

Thanks,

DeejHi Edna.....

Welcome. This will involve loading drivers and installing hardware and software obviously. There are detailed instructions on how to do this in the Paris manual. The procedure is pretty straight forward and the system you have should work fine for your needs. I don't see any red flags with your computer other than the possibility of needing to tweak the operating system parameters to optimize it for audio recording. Still, if you're not going to be dealing with huge numbers of tracks, this may not even be necessary. What operating system are you using? The software you have was designed to run on Windows 98 Se or Windows ME. To use Paris with Windows XP requires jumping through some additional hoops, but it's also pretty straightforward, just more complicated. What i

I feel very sad for your friend.

I had a similar lost of a 50 year old great musician sound engineer a couple of years ago.

May him rest in peace.

The latest version of this EQ (V1.42) adds peeking curves modeled after the Sony Oxford type 1,2 and 3 curves. This adds considerable power to an already great sounding EQ. It is also more stable. This will turn into a commercial product, so I suggest you get your free version soon. Ya know.....Im sitting here listening to some \*roughs\* of a tracking session I did Friday night. No compression, a very tiny bit of subtractive EQ, a tiny touch of NoLimit on the mix bus. That's it. The rest of the story is using the Paris EQ makeup gain and the fader gain stages to get the \*mixphat thing going\*.

I swear guys.....this sounds better to my ears than all of the 1,000,000 gobazzillion plugin options I have available when using the SX rig during mixdown.

It's pretty minimalist stuff to begin with.....acoustic rythym guitar, acoustic lead guitar, fiddle, electric bass and acoustic drum kit.....but that seems to be all I do these days anyway.

Sometimes less is truly more.

Dee| saw a pair of the SE ribbons at a dealer. They do look really well constructed, and I guess they are supposed to be a tad more airy than the Royer. They aint super cheap though as are the shiny.. I really do want to know about the diff in the tranny of the Shiny box mics, I am thinking a pair of these may fit the bill as room mics. Of course you afiten get what you pay for I also want to know how they sound on a crunchy master gain marshall.

I heard a clip of DJ's gemini in action, how does the 5000 compare?

My condolences, Gene. 50 is so young... so very close to my own age...

That really sucks.

pabCool, one thing I really harp on wiht bands about guitars is less is more. So many great guitar bands (Led Zep, The Who, zz Top, Hendix, and even more modern stuff like The Smiths, or the Clash) did not use that JCM800 type marshall sound but often used cleaner sounds and less wall of guitar overdubs for sure than say Foo Fighters or something of that nature. so it seems that many of the LDC's or even 57's can sound pretty abrasive with them, but these High Gain amos can sound cool for sure, the ribbon may be just the trick.,I know the 121s do ok for this, but I do think they sound at tad murky too.

How do you find the paris eq stacks up against the 1073 eq?

All the best,  
Mike

>Hi Dimitrio,

Thanks for your answer. The issue for me with this is that I have already spent the \$\$\$ to create a situation here that is zero latency while mixing. It's very fast and easy for \*me\* to use because I customized it to work with all of my personal gear. I don't see any up side to my adding Wormhole to the mix unless it would allow me to keep my tracks in Paris and run a standalone VST rack on a second computer with very low latency (40ms tops). If I could do this, I could use Paris fader automation and not have to transport my tracks over to a second comp

Okay I did the mic shoot out but the files are way too large to=20  
post here. It's 6 Meg. 16 tracks in all. If you want 'em I can email=20  
them to you unless you have another way. I don't really want to be=20  
printing disks.  
Tom

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =

Cujo,  
I know what you're saying about the hi-gain sounds. The  
414 is always abrassive here. I have been a 57 lover from  
the getgo but am always fighting to reproduce what's coming from  
the amp in the control room. =20

If the 121s can be murky maybe that will be true with the Shiny Box  
also. I can say they accept paris high end eq very gracefully. Not  
like a 57 or a 414. =20

The jury is in session as we speak...  
Tom

You were right.....I didn't have all the effects cleared...when I did that it worked fine.

Thanks for the suggestions.

Mike.

By the way, you can make a headphone mix across submixes  
without using an external mixer in Paris. You will need 2 Mecs  
and 2 spare A to D and D to As in each mec.

Let's use Aux 1 in submix A & B.

After setting up aux 1 to be stereo and pre fader in both sub A & B, =  
draw lft & rt=20

patches from aux 1/sub B out to any of your available 8 ins. Hardwire =  
its associated

outputs to two more inputs of sub A. In the Paris patchbay loop the =  
channels

in sub A from insert in/out to 2 channels of 8 in/outs on sub A. This =  
should be the

same two channels that you hardwired Sub Bs aux 1 bus to. Now send  
those two channels via mixer A into aux 1. You have potentially 14 =

channels from  
sub A and 14 channels from sub B feeding your aux 1 headphone mix.  
Costs you a couple of channels in each Mec but I don't find myself =  
needing=20  
to record more than 28 channels at a time ever.

A work around that works. Been using it for years.  
Tom

Now if I can just figure out how to download the files. Hey, no problem--I'll get my kids to help me (if I can pry them away from myspace for a few minutes)

A ribbon mic shootout--I love it

More and more I find myself mixing as opposed to tracking so I've decided to buy a/an outboard compressor(s) to insert on my Main stereo output.

Only requirement is that the unit be as transparent as possible as I'm not looking to colour my mixes.

Budget is between \$4-\$6 K

I'm aware of many manufacturers but have very limited experience with high end units so I'm looking for suggestions and why the suggested unit would be appropriate.

Thanks in advance

DonHey Don,  
check this out :

<http://www.vintageking.com/s.nl/sc.18/category.533/it.A/id.5373/f>

I don't know how it sounds but it sure look cool. Some good words at gearslutz about this company, I'm sure much is hype as always.

The Compeller is great for tracking with subtle level control, but not for 2 bus.

My first choices for clean 2-bus:

<http://www.smartresearch.co.uk/#C2>

<http://www.solid-state-logic.com/outboard/products/xgseries/>

For a little more attitude:

<http://mercenary.com/chtg1li.html>

And my favorite:

<http://www.vintageking.com/s.nl/sc.18/category.336/it.A/id.4789/f>

Some people consider the Neve a sound-adding compressor, but I think it just makes the sound creamy. For a more rock/aggressive sound I like the Smart.

Rupert will have a new Portico contender soon. Based on the current offerings, I am sure this will also be good.

The one area where big commercial studios still kill, is the ability to try out a variety of mics or pres, or compressors, I will never own this kind of collection.

Gene <http://www.vintageking.com/s.nl/sc.18/category.413/it.A/id.2.68/f>

I'm using a Drawmer 1968ME right now, but I'm eyeing this one. Multi band compression scares the hell outta me...more control but more to screw up

;-)

> Hmm, so Gene, you;d say a Compeller could be good for drum O/H's while tracking to keep form getting "overs" while still getting a good hot signal into your pres?

It is sort of like an RNC on supernice no? Right now, I only have a lowly DBX 166 for this (old one) although, I read somewhere recently that the old 166's are close to the old ssl..Was that you who wrote that? MAY have been Fletcher

compensator for VST

my situation but I'm not sure

it will help me. I like staying in Paris. The only thing that would help me is to use a second computer with Cubase to send softsynths to Paris and/or process/outboard effects for Paris global or even inserts if extra dsp was needed.

From what I know it won't help me greatly for any of these things without tying down the CPU and still have latency issues. I'd do better using realtime ADAT in/out and I already have that.

If I'm wrong tell me why. With Paris being the mother ship I don't see any great options here. On the other hand I'd be glad to buy a latency compensating version of Paris when that comes down the pike. I won't hold my breath waiting though.

Thanks Dimitrios for your work. I'm sure many will still benefit from your effort.

Tom

have used them in mixes that I have done in commercial studios once I have used up the other choices the studio may have. Not bad on bass or electric

point.

The negative effect you get going through a D/A-A/D pass at mixdown is lessened considerably by the use of high-end converters. Ultimately, if you have access to great analog gear you will probably come out ahead even with the converter pass.

Most mastering engineers still use analog for this reason.

particularly with transformer coupled devices. Mic pres are generally designed to match 300-ohm mics, a severe mismatch will make your mix sound very small. Also, most preamps have a minimum gain requirement and many only sound good

If you lower the level entering the pre, you seriously reduce your signal to noise ratio.

Of course, some mic pres have line inputs as well and that is a different story. Most Neve pres will also accept line level and can be used to help pump up a mix. I like the 1084 for this.

A good lesson that most engineers fail to follow, is:

LISTEN WITH IT OUT. Most engineers will try adding a compressor, eq or effect and get the track to sound good and move on. It only takes a few seconds

its rare to find an engineer that follows this simple procedure. I should have that in my signature.

Gene>Of course, some mic pres have line inputs as well and that is a different >story. Most Neve pres will also accept line level and can be used to help >pump up a mix. I like the 1084 for this.

So you mean, the DA/AD with the stock Paris converters the gains could still outweigh the issues?

yeah, this is what I meant, take paris outs in to a pre like my BAE 312 via 1/4" then into even my 166 with just tiny amount of GR. Of course I'd check with out it, but I wondered if it was done. One example of why I would want to do this would be on a CD I am mixing that was recorded ny a band at thier home studio on rudimentary gear. It would be cool if this added some meat and nice color.

Thanks for your input Gene,John,

Last I heard, ID hadn't completely given up on the hope that they could make PARIS a viable product somehow. I certainly don't agree with how they handled things around here - because I don't think they acted in their best interest, never mind ours.

But, anyone who thinks that a small number of users with obsolete hardware are going to get custom software written for nothing is nuts - no matter what was said or promised. It's just not going to happen. And that's what ID was being asked to do when Emu backed out.

It's too bad that everyone didn't communicate better and show more understanding at the time. Maybe if ID had said something to the effect that "Emu backing out changes everything, so who is willing to pay more to keep this thing going?" We could have worked something out. But with people calling them names and threatening to sue them, there wasn't even a chance of that happening.

If what we want is for someone else to pour a bunch of money into something for which they will never get a return, we're crazy. It's not going to happen. There was never any chance it would happen. Maybe ID should pay all our credit card bills, too? Or buy us all a house?

All the best,  
Mike
