Hi There;

I miss Paris but have moved on due to SMPTE requirements. I have some Paris units I am getting ready to list on Ebay. I thought I would first list the stuff here just in case a Paris Forum user needs one of them or would like extra parts on hand.

EDS1000

2 Empty Mec,s

442 interface

Cables

interface 2

2 Adat cards for mec

Will forward pics if interested, will also be listing on Ebay soon. Any reasonable offer pre ebay.

This stuff was all working fine but I no longer own a computer with the right PCI slot to hook back up. Has been in a box in closet for a couple years. All offers considered on any of it.

- how much are you willing to take for the EDS 1000 card? \$90.00 sound ok? would offer more, if i HAD more to spend! i assume it's in excellent working condition? any problems with the connector for the cat 5 cable on the card, to the c-16? somehow, the pins in my connector have gotten bent, and it makes the connection with the c-16 very funky- and THAT, along with a few other reasons, is why i need another card---

let me know what you think.

thanks, brother. very much appreciate it.

yours most sincerely,

harry e
