did you guys noticied how FREAKIN GOOD this comp is?

too bad i did not try this before.

on the stereo buss.

low ratio (less than 2) fast attack just shaping transiants without squashing (between 8 and 11 oclock usualy) fast release, to make it gently pumping (between 11 and 3 oclock) no lookahead adjust trheshold, GR less than 6 DB

then adjust mix to taste (way less than 50% for me)

doesn't work on everything of course. It's not transparent, it's like ... a compressed mix, with attitude and feel.

In my opinion, internal paris effect are really good, still in 2014.
