I need to get a wireless mic for club and event gigs (weddings, corporate). I'm familiar with all the manufacturers and in many cases the mics themselves, but I know just about nothing about features to look for in a wireless system.

My tendency would be to look at Shure, AT, Audix first, but are there any clear winners in the not expensive category? I may well be looking for something used on EBay so it does not need to be a current model, necessarily.

Bill

Hi Bill,

Do you have a budget for this ?

Also - what mic are you singing with presently ?

Morgan :)

It's for my wife, actually and she uses an EV N/D257.

As to budget, I'm thinking \$500-700 or so. Is that realistic?

Bill,

I've been using a set of the Shure SLX's, the handheld with the SM58 head (Beta 58 also available). It's been rock solid for my wife (we also use four packs for two headsets and two guitars). Had them for nearly three years and using most weekends. They've work great and they're definitely in the price range.

If you want to go a little more you can get a ulxs with the Beta 87A head, more channels, some say better mic, \$769 at Geetar Center.

Hope this helps

What he said.

We sell and install the Shure wireless and are very happy with the line.

Bill,

I use a Sennheiser and it kicks too. Tone is very clear compared to a 58 but still a dynamic.

The newest wireless setups have a muting circuit to eliminate the squeal/squelch that can kill your speakers/mood if=20 you leave the mic off and the receiver on by accident.

There will also less frequencies available in the future so multiple frequency transmission/reception is going to become more important from what I've read. Maybe something that hasn't been dealt with presently in hardware.

I had not considered a condenser because I thought they would be too pricey, plus I didn't think a condenser element is really necessary for live sound, however I found a couple on ebay that are not too expensive. The vocalist (my wife) who will be using it has a very clear voice, medium volume. She sings all styles and also a lot of jazz. A condenser could be a good choice for her. Any recommendations as to when a condenser is a good idea and when not?

It's a good idea when you have a female vocalist with nuance.

It's a really bad idea when you have a small stage and a drummer right behind her. Picks up everything around her. I personally will never touch another 87a for a typical club date... feedback and bleed aren't worth it. Gimme a larger stage or a solo/jazz gig and we'll talk. Take this advice with the fact that I use about 7000w on the mains in clubs, understanding relation to your situation.

If she's used to the sound/pattern of a N/D 257, the Beta 58 will be your best choice for least learning curve anyway. And unlike a standard 58, the Beta won't pick up everything within 15 cardioid feet of her.

That's useful info. You never know how little space you may have in casual dates and all too often you have the singer right in front of the drummer, with the band spread out to either side.

Yup... EW135G2... 1300 selectable frequencies, 4 frequency groups available, pilot tone squelch, 30mW output (twice Shures) metal body and chassis etc etc etc... we have 60 of them in rentals and we are a Shure dealer.

David.

David,
Looks like the Senn I'm using. It's a trouper and sounds good too.
I think I paid \$400 back a few years.

[illegible]

[illegible]

I've had good luck with a Sennheiser wireless lav for video production.

Cheers,
-Jamie
