Intel CPU's and chipsets are recommended for this card. Call Ali Fawaz at N.Am tech support and ask him for the bulletproof setup

Creamware Audio USA & Canada
Office: 604-435-0540
support: 604-435-5158
Fax: 604-435-9937
Email: info@creamware.com
Email: support@creamware.com
www.creamware.com

I'm running mine in an ASUS A8V-Deluxe mobo with an AMD 64 4400 x 2 CPU with no problems at all, but it's one of the *least* recommended mobos out there. It does, however, play nice with 4 x UAD-1 cards and I'm having no problems with it. If I was starting from scratch, I'd go with Intel.

;o)

OK, you're killing me here. Is there anywhere online that has a recommended mobo/chipset list for Pulsar gear? My debit card is getting all frisky and wants to buy one of the Scope Pro cards. But I don't need another \$1500 dud sitting in my apartment.

Hmmmmmm, I have an Asus AMD board right now but I suppose I could switch pretty

easily. But I'm not sure if I'd go for a new computer _and_ a \$1500 DSP card in one swoop.

Also, you realize that if _both_ of us use this stiff Creamware will not last the year as a viable commercial entity. They're toast. I've loved so much audio gear that shriveled in the vine or blew up in my face that companies should pay big bucks for me to use competing product.

Then again, maybe now that I'm a civilian and not an audio writer that's all over and I'm no longer rat poison to things like the OASYS PCI card .

..

Thad,
I'm building an AMD box for this also using the ASUS A8R-MVP/ X2 4800 by =
Chris Ludwig's
recommendation. I hope it does well with a Scope Pro card for me. I =
won't
buy the Scope card until I have Cubase running flawlessly. But maybe I =
will. . .
I'll be asking questions for sure.

After buying the parts I realized I should of had Chris build it for me. =
It wouldn't
have been much more and surely would run better. =20

I'm a dumb ass,
Tom
