I just tried Voxengo Elephant on one of my stereo bounces. It didn't do anything to it but make it louder.....no skewing of the EQ where the VOX bites your head off, the LF pops your drivers against the far wall of the CR and the HF didn't remind me of a room full of shieking eels.

Credit card has been implemented.

;o)

Holy\*\*\*\*!!!...this thing is quite amazing when chained in series after the UAD-1 Precision Limiter.

WOW!! Even acoustic based material sounds very dynamic. this is sick. I swore I'd never give in to the loudness wars because it always scooter\*\*\*\*ed the sound, but Elephant doesn't do that.

Egg-zactly.

Nice, innit?

Neil

Yes!!!.....It's taking original RMS levels of around -17 and creating PRMS  
Levels of around -9 with no spectral shift. Very "Radio Ready" sounding  
finish

Thanks for the heads up on this one.....see???...you can do something  
right after all, but I'm gonna be skeptical until I compare this to  
something I've done on an SSL

;oD

With an original FC-670 strapped across the 2-buss, I presume?

:)

Two of them...in series. You gotta emulate an RNC with these if you're on the cutting edge.

;o)
