Hi Guys,

I just set up an Asus Z97-A motherboard with a Core i7-4790 and 16 GB or RAM. I haven't done any stress testing yet, but PARIS is running smooth as silk under Windows 7 64 so far.

I have two EDS cards in the motherboard PCI slots. I'm looking forward to seeing how much lower (if any) the latency will be in the ASIO driver.

We just had a baby and everyone is well, but there hasn't been much time or sleep. I'll do more testing and report back when I can.

My old AMD system started crashing randomly. Memory scans came up clean, but I was getting random blue screens every few days. I'm pretty sure one of the cores went bad. This new system is much, much faster. I hate to leave AMD behind, but they haven't really kept up.

The heart of the ASIO driver looks like it's done. I just have to write the control panel.

I'll post more when I can.

Mike

Hi Mike. Sounds really cool. So help me understand what exactly is the ASIO driver? What does it replace in the current Paris 2.x/3.0 set-up?

Hey Mike

Didn't you use the "Just had a baby" excuse last time things got help up with PARIS?

Congrats! Hope Mom and child are doing well

Yeah C'mon Mike -

You gotta get a new scriptwriter! Congrats!

@ Rich - the ASIO driver will enable PARIS hardware (MEC 8I/O) to be used by other DAW software.

I've had it working in Reaper, Studio One, and Adobe Audition so far.

All the best,

Mike
