I installed a vst plugin through the fxpansion 3.3 wrapper and it caused an error in Paris. I uninstalled the plugin, ran fxpansion again without the plugin in the vst folder, and re-started the computer. When I booted Paris, it was still looking for the plugin and gave me an error. I then went and deleted the all the plugin's registry entries. Rebooted Paris, and got the same error. How can I eliminate Paris "looking" for this plugin?

Mike, You need to open fxpansion, delete the folder from the fxpansion datapath (not the hard drive0, re-add the vst folder to expansion. That should clear things up.

Are you using Paris to recognize the VST folder in the "Paris cfg" file? If so, have you tried to delete that configuration from the cfg file and only let the wrapper get the adress to the VST folder?

I remember from earlier that Paris have this problem with its own VSTfolder configuration.

Have you tried "Chainer" and 3.3 wrapper together? "Chainer" to be adressed to the VST folder and the wrapper to be adressed to "Chainer", without any VST adressing in Paris cfg at all?

Just the way I'm using VST plugins in Paris.

Erling

Thanks Rod,

I'll try that.
