http://blog.mlive.com/annarbornews/2007/09/dingell_global_warming_may_req.html

This is the biggest load of disingenuous hubris I've seen in a while. More hypocrisy. Whether you get it or not, your intelligence has just been insulted and be assured that what this is really all about it preparing you to be bent over as consumption falls. Expect more of this BS as gas usage goes down and therefore the tax revenue that a gallon of gas generates is proportionately reduced. To make up for the revenue shortfall, we're going to get taxed into oblivion.....and I was even sorta' thinking about voting for a Democrat for president. The new formula for the American economy is to tax businesses more so that they will continue to go elsewhere while screwing the workers who will be losing their jobs.

Gimme some of that.

Interesting perspective Deej. I know you are very aware of peak oil. And as oil supply fails to keep up with demand, it's likely that the resulting situation will have tax implications which will need to be faced somehow.

How would you handle the tax implications of the transition to a mix of energy sources? Use it as an opportunity to push for low tax policies? Use it as an opportunity to raise taxes? We'll probably see both of those approaches at least.

It's interesting that Dingle, of all Senators, would be the one to start that conversation, eh? Party aside, he has been one of the chief representatives of the auto industry's interests in Washington.

Cheers,
-Jamie

This is what i've been saying. When Al Gore buys global offsets for ten cents and sells them for a dollar, it's a big bunch of money making bullshit! Now this trilateralist bureaucrat bunch of SOBs are going to try to make it a sin tax that we will all have to pay. You know once the government gets a tax passed through they will never repeal it. We will be paying it for then on! It's a scare tactic to cow the people in to believing this bunch of bullshit. There is no significant man made global warming, it's a lie to shift the wealth out of the United States while these rats and their friends get wealthy doing it.

Let's just say for the moment, for the sake of argument, that Al Gore is a cheese sandwich. OK? And on another side, Let's say Exxon is a tofu burger. Alright? Let's just say they are both inconsequential, however you want to visualize that, so we can let all of that go and talk about something more fundamental.

What if the scientists are right that the greenhouse gases (which actually DO help keep the planet warm enough for human habitation or we wouldn't be here talking about it - those gases) what if they DO retain additional heat when we add to them faster than natural cycles can mitigate?

That's a reasonable possibility. Retaining heat is what greenhouse gases do. As a simple analogy, put on a more insulated blanket at night and you're likely to be warmer, overall.

Possible changes in the atmosphere and the likely repercussions are what

many professional and reasonably sane scientists are reporting and discussing.

There is a real chance something is happening in the atmosphere due to human contributions to greenhouse gases. Which means there's a real chance we have to deal with it one way or another. Proactively or reactively. And it's very likely to be easier to deal with sooner than later.

When a Michigan congressman who is one of the main defenders of the auto industry in Washington starts talking plainly about the ramifications of human contributions to greenhouse gases, that's news.

It's not enough to merely tar him as a Democrat. This is the guy who held up updating CAFE. He has not been shy about representing the auto industry.

Cheers,
-Jamie

Al Gore has a \$2500 per month electric bill. He can go fuck himself.

John Edwards who preaches about how he cares about the poor has a 28,000 sq foot house. He can go fuck himself.

Tiger Woods just bought a 65 million dollar house. He can go fuck himself.
These people have WAY too much and never seem to get any humility. Fuck em all. Hypocritical assholes.

Still waiting on Hillary's tax returns for last year.

For me the Dream has always been true freedom, quality health care, food, shelter, minimal government, clean air and neighbors who actually care about each other. Money is just the gambit that has been used to leverage our day to day needs and make us all slaves. Like the bullshit energy crisis. Where are the "new" ideas to decouple us from oil.....fucking nowhere. This government is horseshit.

You can be truly free in America. You can choose to farm the land, depend on no one and pay no (income) tax. In many rural areas of the country you can pay no or nominal property taxes. It is entirely possible.

This utopian freedom has bounds:

At some point you may get sick.

Wish it were that easy, James. We would be poor stewards of the land
indeed if we carelessly dismissed the evidence to date. It's not

particularly prudent to ignore increasing evidence that shows possible problems.

The atmosphere and our use of it to store increasing amounts of unwanted greenhouse gases is a big enough subject scientifically without being sidetracked by political and economic conspiracy theories.

Even if you enjoy discussing perceived conspiracies, be sure you don't confuse them with the ongoing science.

Cheers,
-Jamie

Look at the facts, use your brains, read the reports. crunch the numbers.
It's not a left or right thing, it's not a conspiracy. Now is the time for
intelligent people to step up to the plate. This is the real challenge of
our generation. The next generations will judge us by this.

James McCloskey wrote:

> The science is about money.

To an extent everything is about money. But that doesn't stop people from doing good, conscientious work.

You yourself require money to live. Should we therefore disbelieve everything you say?

No, I don't think so. That argument is really reaching.

> The science of man made global warming being a major factor is bullshit, and it is not provable.

LOL. The science is hardly bullshit.

What scientists are saying is that there is a strong chance that human contributions to greenhouse gases are affecting the climate.

This is because we are dumping large and increasing amounts of greenhouse gases into the atmosphere, above and beyond current natural cycles. Gases that then stay in the atmosphere for extended periods, decades or more.

Keep in mind that greenhouse gases help regulate temperature on earth by reflecting back infrared radiation. This is a good thing for our survival but it can be overdone.

Since only a tiny fraction of the gases in the atmosphere reflect

infrared radiation (nitrogen and oxygen don't), it doesn't take much of an increase in greenhouse gases to noticeably change the amount of heat directed back toward the earth.

There is strong evidence that this is what is happening now, and that our contributions are part of the problem. Based on what we know so far there is a strong chance this problem will increase over time.

Given that information, it's smart to consider the implications now.

> Has the earth heated
> up a bit, yes, the earth goes through changes.

True, and true.

And evidence indicates there's a good chance we're involved in the current climate change event.

> Should we as people stop polluting,
> yes.

We certainly need to be aware of the chemistry around us and how we interact with it.

The ozone situation is a good example. Scientists noticed a change in the ozone layer. A human chemical cause was discovered. Policies were changed to stop human contributions to the problem.

> Should we conserve, yes, I'm a conservative, not a liberal.

Great.

To conserve what we have we need to take into account any evidence that shows we may have a problem.

BTW climate change and conservation are not a partisan issues, in my view. At the very least, most people don't want to screw up the area where they live, no matter their politics.

> Am I buying
> in to the liberal's sin tax plan their trying to convince the dummies to
> start paying to save the world, NO WAY!

That's fine. But don't confuse any perceived conspiracies with ongoing

climate science.

You can promote your political views without attacking climate scientists or dismissing scientific conclusions.

> I'm I buying in the this trilateralist
> plan to shift more money out of the USA, no way!

That's fine. But again you can promote your political views without attacking climate scientists or dismissing scientific conclusions.

> Back in the 70's, the scientist
> that started this global warming stuff, was predicting that we would be in
> an ice age right now.

Who are you talking about?

> You can post all of the contrived research you, it won't change the truth.
> Choose to believe what you want, man made global warming has not been proven.

If someone is exploiting scientific data in a partisan way to push a certain point of view you happen to disagree with, then fine, argue with them.

But don't pretend the data itself doesn't exist. There is a lot of peer-reviewed research out there, and it isn't "contrived."

If the only way to "prove" your point is to continue a risky worldwide experiment until we possibly screw up the planet for future generations, then your proof is too late to be in any way useful.

It's much smarter to look at the decades of evidence we already have and make prudent risk management decisions.

Cheers,
-Jamie

The science is about money. The science of man made global warming being a major factor is bullshit, and it is not provable. Has the earth heated up a bit, yes, the earth goes threw changes. Should we as people stop polluting, yes. Should we conserve, yes, I'm a conservative, not a liberal. Am I buying in to the liberal's sin tax plan their trying to convince the dummies to start paying to save the world, NO WAY! I'm I buying in the this trilateralist plan to shift more money out of the USA, no way! Back in the 70's, the scientist that started this global warming stuff, was predicting that we would be in an ice age right now.

You can post all of the contrived research you, it won't change the truth.
Choose to believe what you want, man made global warming has not been proven.

If the global temperature raises with more than 2 degrees celcius, we'll have a global disaster. It's no chance that we are going to avoid that. So beware, the africans, the south asians and the south americans are coming to knock on our door, and they are hungry, they are thirsty, and they are many. And that's just the beginning. This thing is out of control.

China is one of the countries that's going to suffer most from global heating. In fact, they already do.

Conspiracies are another matter.

Back to the science: Evidence shows the strong possibility that humans contributions to greenhouse gases are currently affecting the climate.

If you suspect that some groups are trying to exploit this data for nefarious purposes, then fine, take on those groups. Dig into whatever conspiracies you want.

But don't pretend that the scientific data doesn't exist. You can

promote your political views without attacking climate scientists or dismissing scientific conclusions.

Cheers,
-Jamie

If you repeat something enough times it becomes the truth to some people.
Where is the proof? the European space agency has been photographing the
polar caps from satellites for years, they say the caps are melting, and
then they re freeze and are staying the same over all mass. There is evidence
that proves otherwise.

I would have loved this to be a conspiracy, or some politicians agenda. It's not. Nobody benefits from this.

Remember where I asked you to put aside Al Gore and Exxon for a moment?
Scientifically they don't matter. Don't get distracted.

The scientific point is this: Evidence exists that shows the strong possibility that humans contributions to greenhouse gases are currently affecting the climate.

If you really care about conservation it would be foolish to ignore decades of data in peer-reviewed scientific journals. It would be extremely limiting to cherrypick a few scientists who disagree (or who you think disagree) and ignore the rest.

At some point you're directly participating in a different conspiracy of sorts, as a member of a group that deliberately ignores evidence and attacks the messengers in the process.

How is that helpful?

It's not.

Cheers,
-Jamie

First, I don't think it is only one party that will be on this taxation band wagon, the bush's are trilateralist also, and others. "a thousand points of light" " A new world order" That's trilateral talk.

Isn't it funny that China, the biggest polluter on the planet is exempt from the law and rules the world gov. is trying to put in place. Why? This is all part of the trilateralist plan to shift the money around. The world banks have now set up inside of China.

They are trying to scare people in to a sin tax. It's about money, they want a sin tax to build up the rest of the world. It's about controlling the world economically. They want to restrict what america can build and do in the future.

As I've said before, there many scientists that say it is not true. And I'll say, look at what is really behind this. People like Al Gore are profiting from this, and hanging on to power.

I don't think we're going to convince James, but it's a lot of other thinking members of this group. I hope some of them take the message, it's not about left or right, it's about doing the right thing. This group know about science (recorded music is mainly about physics and technology, right?), and the world need that kind of people right now, to cut the crap and focus on the facts given us by the scientists, and the facts tells us that we are facing rough times, even in our lifetime. So, as I said, step up to the plate, this is not religion, this is facts. This is not the end of the world, this is not the end of humanity, but this may be the end of our civilisation. In other words: no nurcery homes for you , no healthcare for your children, no law, no order ...

but if we can for the first time be a part a mitigating it's efx.
then why the hell not try.
