I will say, however, that my experience with it had to do with my writing
the manual for it: it worked in my tests, as far as they needed to go to
document the card; I also consulted with Ensoniq's engineers on things I
couldn't test here.
I didn't use it in my own musical work after the manual was done, since I
had no need. It's possible you know more about the card than I do at this
point.

Anyone else want to chime in here?

"Don Nafe" <dnafe@magma.ca> wrote:

>Did you ever get the smpte card to work?1 eds - \$175

1 mec- \$125

1 c16 - \$75

2 IF2's- \$50 ea.

Everything is in pristine condition, only used to track a few demo's! Shipping will be added upon sale. Paypal accepted.

thanks

JoeyHello everyone,

I still have some items left for sale:

1 Mec + EDS cable \$100 (with original MEC box!!)

1 8 In card \$250 OBO

Any one interested? Make me an offer. You can e-mail me at djinc@cox.net

Thanks!

David JohnYes...

It doesn't work in any "pro" way except in VITC mode.

for linking multiple EDS cards together? can you give me some idea of how,
or how much, this card was used, and in what type of environment? how old
is it?

ANY problems with it at all?

thanks so much---

looking forward to hearing from you---

most sincerely yours,

harry e. Basically, VITC is Vertical Integrated TimeCode, and it is T/C that is incorporated into the Video Stream of the videotape. We're talking "Pro Videotape" machines here.

It is the eds1000 card, I purchased it about three years ago with version 3. Have never had any problems, less than 75 hours of use, in a non-smoking bedroom studio. Used to track about 8 songs. I sold the other card I had with the crossover cables for connecting to another card, so those are unavailable. Hope this helps. Feel free to email me at joeyl@wgm.us.

thanks

ing forward to hearing from you---
>most sincerely yours,
>harry e.3 more things left! 1 eds card, 1 blue mec, 1 if2. Make me a deal! I'll let
all 3 things go a lot cheaper! Steve chambiprood@hotmail.com...but I'm lowering my prices even
more to see if I can find a home for the
rest of my PARIS stuff. So:
1 pair of C-16s (that's two C-16s) -- \$75 plus shipping. These are blackface
units with Version 3 labels added. It's hard to believe that it wouldn't
be worth having a few spares around in a hard-working PARIS studio. Pots
need a little cleaning, but they're otherwise fine.
1 SMPTE card -- \$100 o.b.o. plus shipping. Does anyone have need of one of
these cards? Make an offer. There's some debate about how well they work,
but I'm into making it painless for someone to give one a try.
1 IF-442 -- \$40 plus shipping.
Will ship to US or Canada. Contact robbyberman@mac.com So I guess the question is will it sync
Paris to smpte TC generated by
another computer
