Decided to swap video cards and see if that would help Paris installation recognize the hardware. Took out the Matrox and put in a Geforce 2. Runs at minimum resolution with 4-bit color. Claims that it can't find enough resources. So I attempt to install some nvidia drivers. Sez to uninstall old drivers first, which I do, then reboot. Boots to the black Windows xp screen, and then goes dark and hangs there. Tried safe mode, same thing. Tried a windows repair from the windows CD, same thing. I've never run into this before. It seems there's no video driver in windows??? anybody. . . .

I had that once before... you have to clear the CMOS... do you know how to do that? Do you have the manual for your mobo? If

so it might say how - you're prolly gonna need to reset a jumper.

If you haven't already, pull out all the cards except the video. See if  
you can get in that way and get the drivers in with the video  
card...Then add one card back at a time and boot to verify you're clear...

If you already tried this then go to your tool shed, grab the 12 pound  
sledge and....

;-)
