Do any of you have or know how to reset the Sony HR-MP5 processor? I have two of them. Neither of them will fire up. I have replaced the lithium battery in both about two years ago but have had them shut off and sitting on the shelf for about a year and a half. All I get is a very faint light blue glow on the screen.

Is it possible that even though the lithium batteries were new, 1 1/2 years is just too long to sit on the shelf? or Does it need to be reset? How?

Steve
