
Subject: vcd_Open: failed to lock process gestalt memory!!

Posted by [TC](#) on Sun, 02 Nov 2008 18:23:49 GMT

[View Forum Message](#) <> [Reply to Message](#)

I've done an XP + paris re-install on my mac pro, and am now getting this error.

The title of the window is DBERR!!

"vcd_Open: failed to lock process gestalt memory!!"

After that I get an unhandled exception, and it crashes.

I'm not sure if it's related to the dual core, the expansion chassis or Paris.

Anyway, it seems these errors are shouting at me, but I'm not sure what they are yelling.. can anyone shed some light on what this means?

Cheers,

TC

I'm just redoing everything over again after reformatting the drive.

I found my old Drive Image 7 cd, so I think first I'll install windows and my bootcamp drivers, then do the windows security updates maybe and ghost the whole thing so I don't have to keep reformatting if I screw it up.

When I had got Paris running on this the other day, I had done the XP updates first before installing all the paris software etc. (I don't think I did the XP service packs), so I'm thinking maybe not doing that this time was contributing to the errors..

Cheers,

TC

Hi Mike,

Thanks very much. I did use the affinity tool, but only on the scherzo driver for the one card that's in the expansion chassis. I'll take a closer look if I need to be doing it with other drivers.

Also, my system is just a dual core, but the affinity tool showed 4 cpu (0-3). Is that correct?

I'm just reinstalling windows, so I'll give it another shot and post back.

Cheers,

TC

Hi TC,

You're seeing this error because you are using a debug build of the PSCL.
I've seen this, too. It means that the scherzo was turned down by Windows
for enough memory to create the buffer that the App uses to talk to the hardware.

Have you locked all Scherzo drivers plus all drivers that share an IRQ with
the scherzo drivers to the highest number CPU?

That's where I would start. I've attached the inaffinity tool and a tutorial
on how to use it to this message. I hope it helps. Let me know.

All the best,

Mike

[View Forum Message](#) <> [Reply to Message](#)

Hi TC,

The 4 CPU thing is weird. I'm pretty sure that my dual core just had CPU 0 and 1. I'd try locking it to CPU 1. This may be a stupid question, but are you sure it's not a quad core?

Good luck with it. It can be done. I've got PARIS working perfectly on my quad core under XP SP3.

Make sure you're also locking the PARIS app with the Tom's Hardware tool.

All the best,

Mike

Hi Mike,

I'll double check the # of processors when I boot back to OSX. Is the Tom's Hardware tool just the "Interrupt Filter Configuration Tool", or is there something else I need to download?

I just don't see how I can "lock the app" through that, just drivers..

What am I missing here?

And by the way, thanks for your hard work, it's truly amazing what you are doing to move Paris forward >>>>>.

Cheers,

TC

Hold that thought.. I guess it helps if I actually install the app first.. ;0)

Trying it now..

Cheers,

TC

I just confirmed,

This mac pro is a 2x 2.66 GHz Dual Core Intel Xeon

So it's 2 dual cores.. should I lock to 1 or 3?

Cheers,

TC

Hi Mike,

I tried again locking it to 3. I still didn't see an option to lock the paris app itself, but I locked the scherzo and midi drivers, as well as the primary and secondary pci bus, in case that was relevant.

When I launch paris I get the same error as the subject line, and it

crashes.

Anything suggestions?

Cheers,

TC

Can you find out your IRQ assignments for other stuff? We Mac users aren't even supposed to know those exist, but maybe under XP...

- k

Yeah, found all that. I still don't see any option to lock the app
itself though. I locked all the pci buses to the same cpu.. now I'm
probably screwing things up..

Strange that on my install the other week I got paris running. Now on my
reinstall it won't even launch..

I'm looking on ebay at a cheap backup Athlon pc in case this doesn't
fly.. haven't given up yet though.

Cheers,

TC

Hi TC,

I think you're almost there.

You have 4 cores, so you need to lock to cpu 3.

You have to use the Tom's Hardware utility (attached) to lock the app to CPU 3 also. Just run the Tom's Hardware app before launching PARIS after first creating a profile for PARIS.exe.

Let me know how it goes.

Mike

Subject: Re: vcd_Open: failed to lock process gestalt memory!!

Posted by [TC](#) on Tue, 04 Nov 2008 02:33:01 GMT

[View Forum Message](#) <> [Reply to Message](#)

Hi Mike,

Thanks for attaching that. Unfortunately I'm still getting the same error. For the other IRQ assignments, I'm not sure what the eds card is using, as it doesn't show up under the IRQ list at all.

I've got Ensoniq Scherzo showing under system devices, and the midi driver showing under sound, video and game controllers..

If I switch to resources by type or connection -> IRQ, I don't see the eds card listed..

Cheers,

TC

here's a document I made up for finding what devices share an IRQ with the Scherzo.

Let me know if ti helps.

Mike

Ok...if it's not in the list, the driver isn't loading - which would cause the PSCL to record the failure to allocate the buffer.

Good luck with it. Are you using a PCIe to PCI expansion chassis? I've never tried that. Let us know how it goes.

All the best,

Mike

OK, what you've got is contagious; now I've got it too, on a previously flawless PARIS install after a reboot. Weird. Investigating further.

Hi Kerry,

I'm home sick with a cold today. Give me a call if I can help.

All the best,

Mike
