Anyone here using a macbook pro & a firewire interface?  
I was thinking of using this sort of setup for tracking  
(my G4& mecs create a lot of fan noise)  
I would then port the tracks over to paris for mixing.  
This project would be recorded through either api or  
demeter mic pre's (with a 1176 or dbx160x if i use a comp)  
then to a ua 2192 converter acting as a master clock.  
Thanks Eugene

Macbook Pro with Metric Halo 2882 or ULN2, depending on the I/O you need.  
You can record directly into the record panel of the MIO console.  
For details:[http://www.mhlab.com/metric\\_halo/products/](http://www.mhlab.com/metric_halo/products/)
