**Subject: Thoughts regarding locking to video**
Posted by Tyrone Corbett on Fri, 28 Apr 2006 20:59:37 GMT
View Forum Message <> Reply to Message

I have been living with Logic 4.7 as it was PC based. Along with 4.7, I am
using an Emagic Unitor 8 as the midi interface. I am now interested in upgrading
my sequencer rig. I understand that Logic 7.1/7.2 provide a feature to lock
to video within the app. My questions are:

1. Should I go with a Mac G5 (if so, know of any great deals out there?)
2. Are there any PC apps. that can handle this as well?

I am searching the web as I'm posting this.

Thanks?

Tyrone Corbett

I guess I'll need to invest in an ADAT card for paris to keep it in the loop
as well?

No, if the unitor 8 can read smpte(I think it can)and change it to midi time
code, just set Paris to read midi time code. This is assumeing you have the
unitor 8 hooked up in such a way that you can get midi to your computer.
I use an old Opcode 2 port SE that does just that. Works like a charm.

Yes, Logic 7 does this using quicktime video playback. Works great.
Logic still has a few bugs that keep me from giving it a wholehearted
recommendation, but if you know the workarounds it does a lot.

Digital Performer also does this and DP seems to be fairly popular with
film composers. Look at both and choose the one that works best for you
(or get 'em both if you like).

The Mac dual G5s work great with either program. I use a dual 2.5GHZ and
it rocks. The Intel Macs may be out later this summer...just a heads up.
Whenever that happens the G5 macs might drop in price.

Cheers,
 -Jamie

Yup, the Unitor can read smpte and convert it to MTC.  I've been sending
BT's smpte stripe to it for years and locking Logic on a Mac for years this
way.

Thanks Rod, I'm dusting off the brain and found some old
support notes about this.

Much appreciated!

Mike, I found some old notes about this, but would you be so kind as to draw
me a picture :-) I'm a little slow these days.

Jamie, I'm strongly considering moving up to Logic 7.1 or 7.2 as I have invested
in the EXS Sampler, EVP 88, ES1 Synth, as well as the Unitor and would like
this transition to be as seemless as possible. My only preoccupation is going
to a G5 as it is so very costly...know of any good deals?

Thanks!

Hey Tyrone!

At Apple's stockholder meeting last week, they said that the G5s are sitting on the shelves.  Buyers are not buying them in anticipation of the new Intel models coming out soon.  There will be some price cutting on the G5s, how much, and when is the question.

You can always buy refurbished models from apple at a discount at the Apple store on line, and they come with a one year warranty.  If you sign up for a class at a community college, you can get the student discount, it's about 10%.  Look at apples discount pricing for education.  The best deal on Apple is if you sign up for the student ADC program.  It cost $99.00 for the year, you get all O/S upgrades for free for a year, and a one time discount on hardware, usually 20% off, accept on the MacMini.  That is the best deal anywhere, it is below dealer cost.  All ways look for the free printer deal when you buy from Apple.

FYI, in September Apple runs a student special on iBooks, and you get a free

iPod, or equivalent discount.

Thanks for the info James...much appreciated! This is getting a bit involved
as I am now also researching going The PC Cubase route.
