>
>Okay - coulda been a dumb move but I was rummaging through eBay this morning
and came across two unused, tested, all-good AMEK 501 channel strips (no
fader module). The max bid was sitting at 100 pounds (GBP) or roughly 180
bucks. For grins, I snuck in a bid at closing for 102 pounds and won. Are
these srips of any particular noteworthiness? Does anyone have any
favorable experience with them? Should I move them or go through the
trouble of building out some power and i/o and see if they kick ass?

These are from the AMEK/LANGLEY 501 40ch automated consoles circe '94.

to say remote desktop has had much faster graphics refresh for the apps I've
run with it. I think because it has tighter integration with the OS and can
therefore push less data across the network and achieve the same or better
result.

Just my two cents, but it's also free, and you don't even have to download
it.

The downside is that it will log you out of the local m

that allowed you to have multiple remote
desktop sessions concurently with a local session, and it has been reported
that you can use a .dll from this version with XP to get passed the shipping
limitation, but that hack appears to be broken in the more recent versions
of XP (such as Media Center 2005) that I have tried it with.

Good luck!

;o).

Man, what a long night at the board.We started mixing at 3:00 this
afternoon. 11 hours is a long time. I'm hittin' the rack guys.

G'nite

;o)

>http://apnews.excite.com/article/20050623/D8ATDSD80.htmlI have some minor crashes left.
They occur mostly after closing Paris with memory at specific address error.
sometimes this carsh occurs when I hit the taskbar to change window.
The sub effects system is fine.
Any clue ?
Regards,
Dimitriosphew, i thought he had exploded and i missed it on the evening
news....well, welcome in another year of geezerdom...deej...

>Nappycomputer gurus and savants--

here's one for you.

I got this G3 yesterday. $100 on Craigslist. Piles of memory. Running OS 10.2something.

I think to myself, hey, what a great Paris computer. (My 9600 finally went blind the other day.)

So I get the thing home, fire it up. Works fine. T
