Hi Sassonsb,

I spent the better part of 3 year working part time to make PARIS run under Windows 7 64. Initially, Intelligent Devices was supportive. They gave me permission to write a new installer for PARIS (the original is 16 bit and won't run under 64 bit windows), Edmund Pirali did his best to answer questions, and then things changed. He stopped responding to my emails and didn't deliver the promised PACE free version of PARIS 3.0. I'm not sure why this happened.

I released my installer anyway, even though PARIS 3.0 will not run under Windows 7 64 because of the PACE code that is embedded in PARIS.exe. I'm still hopeful that ID will release a PACE free version of PARIS 3.0 eventually, and people can just swap the PARIS.exe file when that happens. PARIS 2.x works fine under Windows 7 64, with the exception of 32 bit MTC, which has been broken for years without anyone noticing.

I'm upgrading the store software, so I'm not actually sure if this works yet, but you can read about the driver and the installer here:

 http://ensoniq.ca/catalog/product_info.php?cPath=27&prod ucts_id=44

With my driver, you can use PARIS 3.0 or 2.x under the 32 bit version of Windows 7, and you can use PARIS 2.x under the 64 bit version of Windows 7 64. If you want to use PARIS 3.0 under Windows 7 64, I encourage you to contact ID and politely ask them to provide you a PACE free copy of PARIS 3.0. Maybe if enough people ask, they will deliver it.

All the best,

Mike
