Hi all

I'm posting for a guitarist friend who's looking to get a better audio card to record and transfer files from his 002r

He needs 2 audio inputs and the rest in light pipe -16 tracks minimum (he says)

I suggested the Lynx series as a starting point for both quality and price and he thought that was reasonable

Ant other suggestions.

Please send links if you can so I can C&P them to him

thanks in advance
