Before I met you guys, I was soooo ungeeklike. I mean, all I wanted to do was show up at an unplugged gig and plug in guitar DI to a PA that someone else had set up. I would look at the rack of gear and the mass of cabling and think "man, I'm glad I don't have to deal with that crap". I would turn on a computer and not **** with it. If it was acting wierd , I would send it to Dell or Apple.

Well.....last night, my 220v GC-8, which is a proprietary remote control for at 220v Roland R-880, died. Well, I hooked up another one that I had bought on EBay for just such an occasion and it and I don't even want to go into the insanity that happened next, but I ended up stiing down with the 2" thick manual and reprogramming a buch of stuff on the damn thing and now it works. I know, I know..that's what 2" thick manuals are for...right? It's just so out of character for me. I used to be soooo right brained. My head didn't even explode when I sat down and did this, though I did spend a few anxious moments when I resigned myself to the RTFM last night and sat up until about 3:00 AM getting my head around military Rolandspeak. Jeeezzzz.....after dealing with the cryptic reduncdancy of this manual, I could probaly get a job as an artilleryman in the Royal Marines. In a former life, I would have jumped up and down on it until it was in pieces and then thrown it out the window and gone for a jog or something.....(sigh)

I mean, this is only a brief example of the stuff I find myself doing on a regular basis nowadays. I no longer bear any resemblance at all to my former self or just about any "normal" person I know.

OK...rant off.....

DJ,

I have a little edirol/roland controller. As far as I can tell roland products are designed and produced by robots, with the target consumer being a computer.

I have burned in my brain a sequence that goes something like this:

1-1/2-1/3-1/4-1/2-9

That roughly describes the button sequence required to reload the factory defaults.

Working with these things is like directly writing machine code without the benefit of an assembler. For those of you with human brains, think of any typical task and how Roland would approach it. If you need to sweep the kitchen, first gather the raw materials and tools required to construct the sweeping device, then melt the polymer resin, pour it into a mold, let it cool and retrieve the newly formed dustpan.

Chuck

DJ,

Rolnd manuals aren't that bad....once you byte into them!!!

;-)

Many of us started out like you, DJ. It is sort of addictive. The more you know, the more you want to know.

Truthfully, I think my indulgence in technology has hurt my playing by occupying the time I would have spent playing and practicing. My recordings sound better but I have to punch more than I would like.

Don't even get me started on this newsgroup...

did you just grow one of them vagina things??? you know where nothing
is your fault and your life is forever changed???? and no who's
sitting here 18" behind me...totally in another world...so
what....it's not my fault she doesn't know what's going on here....

the newsgroup is like that, Bill.

I had to give up the "read every post" habit I had for 5 or 6 years. I still check in every once and awhile and utter a few wisecracks and then melt away again...

I'm gonna teach mine how to talk.

;o)

Then you could write a play....

Oh, wait. There already is one.

Never mind.

pab

OK then.....well, since that's been done, I guess I'm gonna have to deach the damn thing to sing.

;o)

i don't know if i'm comfortable with that "deach" word...but i'm fine
with the singing thing.
