Hi yall,

I can't seem to get my tracks to be loud enough. I can adjust the monitor level up on my submix master fader (in the mixer view) to make my setup "sound" really loud and clean through my monitors but with all my levels at +10 on my tracks i'm barely hitting red and my recordings don't sound nearly as loud as i'd want them to. In the patchbay my tracks are all switched to semi pro -10. I have a dvd about paris and it suggest to put an eds insert compressor on every track. Is this why? Or is there another setting that I am unaware of. Master mixer's and sub fader when bumped to the top reads 0.0. I am mainly using hardware synthesizers such as a Nord modular and an E-mu MP-7
