
Subject: Weird Lockup - RAM? CPU? Other?

Was tracking some drums last night & the drummer didn't like the way he played a certain break, so we tried punching it... still didn't like it, so we tried a few more punches & got one he liked, so as I was checking to see if it would blend well (applying crossfades, nudging them into different spots to see if we could get a seamless edit), the app (CubaseSX v3) locked up... had to save the project under a different name & reboot. This happened to me once before, under the same circumstances... bunch of punches on a drum track, then grabbing the crossfades & moving them. What causes this? Is it a problem with the app itself in the way it handles that info, or is it a RAM or CPU issue? I doubt it's a disk streaming thing, because it's not like we were trying to do these edits on the fly - the machine was stopped at the time, in both cases.

Just curious - anyone know?

Neil

computer magic gets my vote. can't tell you how many time shit like that happens no matter what app...it just does...personally, i'm going for what you had for dinner...or...you put too much crap in your hair and are no longer familiar to the current you are taped into.

<bump>

Anyone (like Chris or Chuck, perhaps?) have an idea on this?
(see below).
