How do you compensate for latency on say a stereo UAD la2a on track 15 and
16 set up to receive drums and bass guitar for smashing and blending with
the original tracks that also may be using UAD plugins or not?

Also I'd like to use the UAD plate and send more than one thing to it. How
do I compensate here?

We buy gasoline here that is extracted and refined right within the province, but that 'commodity' aspect, linked to world market prices, means that prices move instantly w. big fluctuations such as Katrina caused. But our province is rich!

Martin, re-thinking your previous response makes me consider whether maybe my "emotional" attachment to Paris is getting in the way of good common sense. It seems to

me that the EMU system must have directly taken much of the best of what Paris is...then added all the integrated extras that Paris lacks.

The eds compressor as an insert in a mono channel doesn't really work and
also all the presets are gone.
At the same time everything works as a master insert (even if the preset are
still missing).

A BIG THANKX to all that help this great sounded system to still work.

AlexHi,

What I would do is reinstall the subsystem effects in you Paris directory.

You know the minimum setup exe

Be sure that this will install in your Emu folder.

Regards,

Dimitrios

So if I got one of these cards, primarily for the EFX, just to have some more variety & lighten the CPU load when I'm running more EFX, would I also be able to use it at the same time in the same PC as my Multiface/card combo? For example, if I had my multiface full up recording with all 8 inputs, could I use the inputs on the Emu card at the same time if I needed a couple more in's? I've never run two cards before, so I don't know if this would work.

For that matter, if I was using the Multiface as my main interface/card, regardless of whether or not I wanted to use the Emu card for more inputs as mentioned above, could I still access the EFX on the Emu card & use them as plugins?

NeilThanks D, I figured tghere was no work around to the fact that the drum tracks would need to be copied. This is sort of the same deal we tralked about 2 weeks ago regarding using the EDS comp in the aux. I'll have to check out that compressor you mention. or get another EDS card.

>Neil,

I looked into this scenario. You're using Cubase SX right? It will only recognize one audio driver, so you could do either/or, *if* the EMU and RME drivers will play nice in the same rig. Also, the E-MU hardware has absolutely no sync capabilities other than smpte or midi. Maybe not a big deal to some, but a deal killer for me. I have heard reports that the ADAT output of the E-MU is not *true* lightpipe and therefore doesn't always lock up reliably when sending 8 channel digital data, so this might, or might not work just as a standalone interface using only the software control panel to route analog signals directly to the ADAT outs of the E-MU card and then stream them to the ADAT input of the RME card running Cubase SX. I assuming that this *might* be the case if the situation was reversed and the E-MU card was being used by Sx and the Multiface was your standalone.....but I really haven't figured out how to use the Totalmix software to route signals without using Cubase SX as the middle man anyway.

All the others have no latency at all. They're all well worth to test.

They're built in a form of the same way as the UAD-1 plugs, digital analyzes
of old analog gears in the top class. <http://www.kjaerhusaudio.com/aclm.php>

Dimitrios,
I tried once to get mono reverb but couldn't get it
to work. Do you have the method on paper?

I'd like to be able to use that from time to time.

>Not sure I understand what you want to do... In Wavelab you can use the montage window to crossfade from one file to another. The CD markers can be laid where ever you need them, including in the middle of audio. If you are looking to lay markers out of sequence then no, it can't do that. Once you get a handle on it, the montage window is really very fast for this sort of thing.

>Hi there... Can someone give an example of using the Paris ASIO in a real
scenario? I figured ASIO would show up in the settings of other
apps...(Wavelab,Traktion) so you might use the Paris Ins-Outs...but do you
open Paris AND the other app at the same time or what?...thanksHi,
Can someone tell me please how I get the Presets from UAD-1 Plug-ins In Paris
3.0?
Thanks!Many years ago (May of 2001) I downloaded the Mac version of Paris 3.0 and
never obtained the CD containing the PC as well as the Mac version of Paris
software. I'm now considering buying a new PC to use with my Paris rig (MEC,
EDS card, Control 16 and 3.0 software). Anyone know how I might go about
getting the PC version of the Paris 3.0 software? (I still have the order
number, key number, and response code for my internet purchase of the Paris
3.0 upgrade.)

Many thanks,
Richard FaylorI have a very dense song with many many audio files.
In this folder there are also files not needed.
I would like to be able to make a new directory with only the working files
but this should be something that Paris should do. I don't know which files
are actually used, well ,I can see them by selecting "unused" but there are
tons of them. Can Paris do that ?
Regards,

Dimitrios<http://www.emu.com>

go to support, digital audio, legacy systems, Paris Pro, software and manuals.. etc....

That being said, don't count on your current key to work, when you change systems you change challenge / response and still have to wait on ID to get back to you... unless you were to find an alternative method of dealing with PACE.

>I remember when you were posting about your troubles. It sucks big time. I hate it when you buy something, and the new and improved model comes out the next week. I've been looking at the new G5's, but sure as shit if I buy one, next week Apple will start shipping the new Intel Macs at 4 GHz or some such. I will admit that Apple has had a less than stellar reputation for taking care of the customer. I would have a bad taste in mouth if I were in your shoes also. Like I say, my system isn't the fastest Mac out there, but it does what I need at the moment and I'm just gonna leave it be. I just bought a Power Book with Tiger installed. Hopefully MOTU will get DP updated soon so I can switch it over and dedicate the old G4 to PARIS only. Until then, it's still dual boot for me.

>Hi Guys & Gals,

How is everyone implementing Serial ATA drives into their multi-card PARIS PC/Mac..

I recently purchased 2-300gig(16meg cache)serial ata drives on my Asus A7n8xE-Deluxe However, on this resides 4 EDS cards..Now, The EDS's are now in a war with the Serial Ata drivers..

Very bad.. Both are fighting over PCI bandwidth..

Any work arounds?? I though about getting into a Magna Chasis to aleviate this problem..Yes/No?? Thanks?Aaron,

I pulled the card and sent it back to the party I bought it from and they are sending me another one to replace it. When the new card arrives I will see if I have the same problem. Will keep ya'll informed when I try to get the system up again.

Thanks for the reply
Keith

This is exactly what I want to do.
Not out of sequence, just more optiions than say a Roxio with 2 second or
3 or whatever they allow so I have an accurate sequencing to give to a mastering
guy to follow..also so we can test drive the sequence for a week or so.

That is great of WL Essentials will do it. The Steinberg guy said no, but
he may have misunderstood me. He siad I needed the full version for that!

So UAD plugs are also ok in WL E?

>>LaMont,

I can't see why there would be more data on the bus than there would be with

IDE. As I understand it's the same protocol etc, so data throughput should be the same as standard IDE.

Also, depending on your MB chipset, many new chipsets don't shove everything down the PCI bus, but deal with things straight from the chipset to the SATA ports. This is obviously ideal as it not only clears up the PCI bus, but also allows quicker transfer of data to and from the SATA ports because they don't rely on the limited PCI bandwidth. Indeed, if I'm not mistaken, that MB has a NVidia chipset, and I was under the impression that all the NVidia chipsets did this. This is worth checking as it is possible that your fault is elsewhere.

You're sure it's not an interrupt thing?

Cheers,
Kim.

You cannot use FDISK, but even when you use BootIT to do your partitions, it doesn't solve the fact that Windows is only programmed for having 4 partitions. Yes, you can HAVE lots of partitions, but you can't SEE them all at once. You can only see 4 from Windows. Hence you have to tell BootIT which 4 partitions you want to see depending upon which OS you are booting.

Cheers,
Kim.

>OK, i got it. Let me see, there's only one primary partition that can be set active with WinXP at once, so you shouldn't see any other primary partitions at all, the three others can then be logical partitions, just for working stuff like PAF's, waves, etc etc. When changing over to another active, primary WinXP, you should allways see the three, same logical partitions for working materials. So logically, you can have "oceans" of primary partitions hided, just to be called up with the manager when using Bootit's own system. But you can only see the active WinXP partition and three logical partitions at once. That's my understanding but I'm just thinking high here without any knowings....
