Was thinking I might like to stuff some of my favorite DVDs into my iPod
once in a while. Anyone know of good software to convert DVD movies to m4v?
I tried a shareware thing by Cucusoft today, and the quality seemed fine,
but it took about 38 minutes to convert a 30 minute clip. Ow. Maybe
there's something that will do it in less than real time?

Like I said, not terribly important. :)
