Subject: Found the solution: EDS Compressor Problem
Posted by Sharon on Sun, 24 Jun 2007 11:07:03 GMT
View Forum Message <> Reply to Message

I sure appreciate all the helpful tips posted here and wanted to share that
I found the solution to a problem when I migrated Paris to Windows XP Pro.

The problem was that the EDS compressors were not working for the channel
inserts. It was frustrating since I really like using them and all the other
insert efx were working.

I'm a big fan of Chuck's plugins and had installed all of them.
Unfortunately, on my box, there was a conflict. When I removed all but the
basic EDS effects dlls from the system32 folder the compressors worked
again.

I still have the eventiter and modulation efx working so that good since I
like them alot too.

Anyways, since I had posted in the midst of my confusion, thought I post the
solution too.

I hadn't seen that reaction yet, but I think some of the skunkworks plugs
were deemed too buggy and it was suggested to not install them. Which of
them did you have installed?

I had installed all of the skunkworks plugs - I removed all but the
eventiter and the mods.

I really love the plugs and as time permits, I'll start adding them in again
until I isolate which one was causing the problem on my computer.

FreakQ is the one that seemed to cause the most issues I believe, and it seemed like there was a little 3 pack that had something in it that created issues, name escapes me at the moment. Define "all" of them that you installed and I can likely pick the one out.

My experience is that "PC Freebies" is the culpret. I had all kinds of weirdness going on until I uninstalled them.

I think PC Freebies was the problem - although right now just for
troubleshooting, I also removed FreakQ, I did previously have that running
with no problem.

right, remembering more of it now.... FreakQ was the one that would foul up
on the lo pass band.. I think. Jeez. Old age sucks, heh...
PC Freebies was the one Chuck said to not install.

Aaron

SO here's the list

PC Freebies
1. Sine generator.
2. Volume Control.
3. Comb filter.

PC Value Pack
1. FreakQ
2. BarbEQ
3. KickBack
4. ModPack
5. Nolimit
6. Pseudo

7. Eventiter

Sounds likethe freebies and FreakQ are out. Any others?

Memory serving, that is all but I think I recall a little bug in NoLimit
with the outer reaches of timeline that cause problems. I'd have to fire up
the Paris rig out in the studio to say for sure, but fully clockwise and/or
fully counterclockwise I think brought about issues when adjusting
lookahead. Otherwise the plug was fine and, IMHO, awesome at what it does.

That's correct, stay away from 50ms lookahead, which is all the way to the
right.
