yay!

Thanks DJ. If I can get this working it will be very cool.

Cheers,

TC

DJ why dont you use the wormhole thing? Is it because you are using outboard gear as well?

Brandon

Yeah.....that's the reason. I just had a long discussion with the Creamware rep for North America and ordered a Creamware Scope card with 6 DSP processors, 24 ADAT I/O and a sync plate. If this works as I envision and I like the FX, I'll be mixing in totally Paris once again and using Scope DSP, Paris DSP and hardware DSP and losing all of the RME cards and the UAD cards (I'll keep one for mastering). I love the UAD-1 cards, but I'm going to have to look for an alternate solution for mixing. Too much latency to use with Paris for the way I want to work. I'll also probably be ordering a second Scope card with another ADAT I./O and a Z-link option so that I can use their 16 track analog AD/DA converter for routing external FX through Paris as well. I want zero latency DSP mixing and Native just ain't for me. The more processing I add to a native mix to make it sound like Paris, the more processed it sounds and the less like Paris it sounds. It just isn't floating my boat at all.

Stay tuned.

Deej

Well you can mark me down for a UAD card when you decide to let them go Deej

Very interested in your impressions of the Scope Card

Hi,
In Euros you can find a Pulsar II card (6 dsps) with software either mix

pack or synth pack (ask me when you find one to guide you) 350 Euros.
That will have (classic option) 2 adat ports (16 channels) in/out on spdif
stereo analog in/out and two midi ports in/out (32 midi channels)

Great price !!!

Then as you add, say a sync plate for wordclocking Pulsar with adat sync
that is anothe 179 \$ new.

If you choose NOT the classic wire assembly but the "z-link" then you get
16 adat channels again and one firewire port to attach either Luna (8 analog
ins and outs) or A16U which gives you 16 analog channels in and out !!

A16 is expensive though.

Over 800 \$ new.

Luna can be found cheap.

Converters are better on A16 but for outboard effects Luna is adequate.

Regards,

Dimitrios
